SPPI-1: Case Studies

Group Maturity and Agility, Are They Connected?—A Survey Study ................................................................. 1
  Lucas Gren, Richard Torkar, and Robert Feldt

Towards Customer-Centric Software Development: A Multiple-Case Study .............................................................. 9
  Tanja Sauvola, Lucy Ellen Lwakatare, Teemu Karvonen, Pasi Kuvaja,
  Helena Holmström Olsson, Jan Bosch, and Markku Oivo

SPPI-2: Testing and Evolution

Executable Test Specifications Show No Negative Effect on Finding and Correcting Test Faults in Event Processing Application Development ................................................................. 18
  Johannes Weiss, Peter Mandl, and Alexander Schill

Improving Test Coverage Measurement for Reused Software ................................................................................... 27
  Breno Miranda and Antonia Bertolino

Test and Production Classes of an Industrial C# System: A Refactoring and Fault Perspective ................................................................. 35
  M. Gatrell, S. Counsell, S. Swift, R.M. Hierons, and X. Liu

A Shadow Structure for Modularity of Java Program Evolution ................................................................................... 39
  Akram Ajouli
ESE-1: Testing
Efficient Fault Localization During Replay of Embedded Software .................................................................43
   Hanno Eichelberger, Thomas Kropf, Jürgen Raf, Thomas Greiner,
   and Wolfgang Rosenstiel

Using Design of Experiments to Optimise a Decision of Sufficient Testing ........................................................53
   Mahnaz Malekzadeh, Iain Bate, and Sasikumar Punnekkat

ESE-2: Power Consumption
A Power Consumption Estimation Approach for Embedded Software Design Using Trace Analysis ...............................................................61
   Yassine Ben Atitallah, Julien Mottin, Nicolas Hili, Thomas Ducroux,
   and Guillaume Godet-Bar

Decentralised Load Balancing in Event-Triggered WSNs Based on Ant Colony Work Division .................................................................69
   Paulo R. Ferreira Jr., Lisane Brisolara, and Leandro Soares Indrusiak

SM-1: Maintenance and Refactoring
On the Coherence between Comments and Implementations in Source Code ............................................................76
   Anna Corazza, Valerio Maggio, and Giuseppe Scanniello

Re-visiting the ‘Maintainability Index’ Metric from an Object-Oriented Perspective .........................................................84
   S. Counsell, X. Liu, S. Eldh, R. Tonelli, M. Marchesi, G. Concas, and A. Murgia

The Relationship between Depth of Inheritance and Refactoring: An Empirical Study of Eclipse Releases .........................................................88
   N. Naiya, S. Counsell, and T. Hall

SM-2: Empirical Studies
Believing is Seeing: Confirmation Bias Studies in Software Engineering .................................................................92
   Magne Jørgensen and Efi Papatheocharous

Improving Cross-Project Defect Prediction Methods with Data Simplification .........................................................96
   Sousuke Amasaki, Kazuya Kawata, and Tomoyuki Yokogawa

Creativity Techniques for More Creative Requirements: Theory vs. Practice .........................................................104
   Richard Berntsson Svensson, Maryam Taghavianfar, and Lucas Gren

SM-3: Software Measurement
Run-Time Calculation of COSMIC Functional Size via Automatic Installment of Measurement Code into Java Business Applications .................................................................112
   Rana Gonultas and Ayca Tarhan
PL FSM: An Approach and a Tool for the Application of FSM in SPL Environments

Önder Eren, Barış Özkan, and Onur Demirörs

SPPI-3: Process Improvement

A Dynamic Programming Approach for Solving the IFM Based Project Scheduling Problem

Dimitrios Tselios, Pandelis Ipsilandis, and Vassilis C. Gerogiannis

An Evaluation of Software Process Performance Analysis Activities: Insights from Different Viewpoints

Natália Chaves Lessa Schots, Ana Regina Rocha, and Gleison Santos

MOCS-1: Requirements and Use Cases

Combining Xtext and OSLC for Integrated Model-Based Requirements Engineering

Nadja Marko, Andrea Leitner, Beate Herbst, and Alfred Wallner

Verification of Use-Cases with FOAM Tool in Context of Cloud Providers

Jiří Vinárek, Viliam Simko, and Petr Hnětynka

MOCS-2: Frameworks, Environments and Tools

A Multi-agent Framework for Dependable Adaptation of Evolving System Architectures

Kenneth Johnson, Roopak Sinha, Radu Calinescu, and Ji Ruan

ALFRED: A Methodology to Enable Component Fault Trees for Layered Architectures

Kai Höfig, Marc Zeller, and Reiner Heilmann

Incorporation of Model-Based System and Software Development Environments

Harald Sporer, Georg Macher, Eric Armengaud, and Christian Kreiner

A Graphical Tool for Model-Driven Development Using Components and Services

Simone Di Cola, Cuong Tran, and Kung-Kiu Lau

SMSE-1: SMSE Session 1

What Do We Know about High Performance Teams in Software Engineering? Results from a Systematic Literature Review

Alessandra C.S. Dutra, Rafael Prikladnicki, and César França

A Systematic Mapping on Discovery and Composition Mechanisms for Systems-of-Systems

Porfirio Gomes, Everton Cavalcante, Pedro Maia, Thais Batista, and Kamilla Oliveira
### SMSE-2: SMSE Session 2

A Mapping Study on Requirements Engineering in Agile Software Development .................................................. Ville T. Heikkilä, Daniela Damian, Casper Lassenius, and Maria Paasivaara 199

Using the Findings of a Mapping Study to Conduct a Research Project: A Case in Knowledge Management in Software Testing ........................................................................................................... 208 Érica F. Souza, Ricardo A. Falbo, and Nandamudi L. Vijaykumar

### MOCS-3: Architecture and System Optimisation

Enhancing Model-Based Architecture Optimization with Monitored System Runs .................................................. Juraj Feljan, Federico Ciccozzi, Jan Carlson, and Ivica Crnković 216

Guided Rule-Based Multi-objective Optimization for Real-Time Distributed Systems ........................................... 224 Konstantinos Triantafyllidis, Egor Bondarev, and Peter H.N. de With

### MOCS-4: Validation and Testing

Detecting Incompatibilities Concealed in Duplicated Software Libraries ............................................................. 233 Kamil Jezek and Jan Ambroz

A Method for Semi-automated Generation of Test Scenarios Based on Use Cases ............................................ 241 Richard Lipka, Tomáš Potužák, Přemek Brada, Petr Hnětynka, and Jiří Vinárek

Validating Timed Component Contracts ................................................................................................................ 245 Thibaut Le Guilly, Shaoying Liu, Petur Olsen, Anders P. Ravn, and Arne Skou

Monitoring of Business Process Execution Based on Performance Indicators .......................................................... 255 Antonello Calabrò, Francesca Lonetti, and Eda Marchetti

### MOCS-5: (Meta)Models and Model Transformations

Automatically Bridging UML Profiles to MOF Metamodels ....................................................................................... 259 Ivano Malavolta, Henry Muccini, and Marco Sebastiani

Improving Reusability of Model Transformations by Automating their Composition ............................................... 267 Cuauhtemoc Castellanos, Etienne Borde, Laurent Pautet, Gardoll Sébastien, and Thomas Vergnaud

Revealing Students’ UML Class Diagram Modelling Strategies with WebUML and LogViz ........................................... 275 D.R. Stikkolorum, Truong Ho-Quang, and M.R.V. Chaudron
TET-DEC-1: TET-DEC I
Special Session TET-DEC (Teaching, Education and Training for Dependable Embedded and Cyber-Physical Systems) An E&T Use Case in a European Project ................................................................. 280
  Erwin Schoitsch
Reuse in Safety Critical Systems: Educational Use Case Final Results ................................................................. 290
  Miren Illarramendi, Leire Etxeberria, and Xabier Elkorobarrutia

TET-DEC-2: TET-DEC II
What Training is Needed by Practicing Engineers Who Create Cyberphysical Systems? ................................................................. 298
  Christopher Scaffidi
Teaching Software Safety to Master Students ................................................................................................................. 306
  Clara Benac Earle, Ana Maria Fernández-Soriano, Lars-Åke Fredlund, and Elena Gómez-Martínez
Applying Property-Based Testing in Teaching Safety-Critical System Programming ................................................................. 309
  Lars-Åke Fredlund, Ángel Herranz, and Julio Mariño

SMSE-3: SMSE Session 3
Vertical Test Reuse for Embedded Systems: A Systematic Mapping Study ................................................................. 317
  Daniel Flemström, Daniel Sundmark, and Wasif Afzal
Software Process Improvement in Agile Software Development A Systematic Literature Review ................................................................. 325
  Célio Santana, Fabiola Queiroz, Alexandre Vasconcelos, and Cristine Gusmão

SMSE-4: SMSE Session 4
A Systematic Mapping Study on Test Generation from Input/Output Transition Systems ................................................................. 333
  Sofia Larissa da Costa Paiva and Adenilso da Silva Simão
Testability and Software Robustness: A Systematic Literature Review ................................................................. 341
  Mohammad Mahdi Hassan, Wasif Afzal, Martin Blom, Birgitta Lindström, Sten F. Andler, and Sigrid Eldh

EsPreSSE-1: Estimation and Prediction for Mobile Systems
Focused Quality Assurance of Mobile Applications: Evaluation of a Failure Pattern Classification ................................................................. 349
  Konstantin Holl and Vaninha Vieira
On the Use of Requirements Measures to Predict Software Project and Product Measures in the Context of Android Mobile Apps: A Preliminary Study .................................................................357
   Rita Francese, Carmine Gravino, Michele Risi, Giuseppe Scanniello, and Genoveffa Tortora

Investigating Functional and Code Size Measures for Mobile Applications .............................................................365
   Filomena Ferrucci, Carmine Gravino, Pasquale Salza, and Federica Sarro

Identification of IT Incidents for Improved Risk Analysis by Using Machine Learning ..................................................369
   Sardar Muhammad Sulaman, Kim Weyns, and Martin Höst

**EsPreSSE-2: Estimation and Prediction for Risk- and Model-Based Testing**

A Bayesian Prediction Model for Risk-Based Test Selection .................................................................374
   Hans-Martin Adorf, Michael Felderer, Martin Varendorff, and Ruth Breu

Estimating the Cost and Benefit of Model-Based Testing: A Decision Support Procedure for the Application of Model-Based Testing in Industry ..................................................382
   Stefan Mohacsi, Michael Felderer, and Armin Beer

**SPLSeco-1: Software Ecosystems**

Spicing Up Open Source Development with a Touch of Crowdsourcing .................................................................390
   Terhi Kilamo, Jurka Rahikkala, and Tommi Mikkonen

Strategic Ecosystem Management: A Multi-case Study on Challenges and Strategies for Different Ecosystem Types .................................................................398
   Helena Holmström Olsson and Jan Bosch

**SPLSeco-2: Software Product Lines**

Bridging the Gap between Software Variability and System Variant Management: Experiences from an Industrial Machinery Product Line .................................................................402
   Stefan Fischer, Lukas Linsbauer, Roberto E. Lopez-Herrejon, Alexander Egyed, and Rudolf Ramler

Graphical Approach for Modeling of Safety and Variability in Product Lines .................................................................410
   Aleksandra Salikiryaki, Iliana Petrova, and Stephan Baumgart

A Case Study Using AOP and Components to Build Software Product Lines in Android Platform .................................................................418
   Gustavo M. Waku, Cecilia M.F. Rubira, and Leonardo P. Titzei
SM-4: Architecture, Business Process, and Risk Management

Towards Prioritizing Architecture Technical Debt: Information Needs of Architects and Product Owners ................................................................. 422
  Antonio Martini and Jan Bosch

Business Process Maturity Assessment: State of the Art and Key Characteristics ................................................................. 430
  Ayca Tarhan, Oktay Turetken, and Fadime Ilisulu

Model-Based Risk Assessment in Multi-disciplinary Systems Engineering ................................................................. 438
  Stefan Biffi, Luca Berardinelli, Emanuel Maetzler, Manuel Wimmer, Arndt Lueder, and Nicole Schmidt

SPPI-4/DFTC: Agile Development

A Maturity Model for Scaling Agile Development ................................................................................................................................. 446
  Igor Stojanov, Oktay Turetken, and Jos J.M. Trienekens

Overcoming Challenges in Agile User Experience Work: Cross-Case Analysis of Two Large Software Organizations ........................................................................................................................................... 454
  Kati Kuusinen

A Cloud Based Architecture for Distributed Real Time Processing of Continuous Queries ........................................................................................................................................................................... 459
  Mert Onuralp Gökalp, Altan Koçyiğit, and P. Erhan Eren

Automated Component Testing of Evolutionary Software: An Industry Example ........................................................................................................................................... 463
  Zlatko Franjcic and Morten Fjeld

CPS / DFTC: Cyber-Physical Systems

Safe Workflow Adaptation and Validation Protocol for Medical Cyber-Physical Systems ........................................................................................................................................................................... 464
  Po-Liang Wu, Lui Sha, Richard B. Berlin Jr., and Julian M. Goldman

Adaptive Knowledge Bases in Self-Adaptive System Design ........................................................................................................................................... 472
  Verena Klös, Thomas Göthel, and Sabine Glesner

Model-Based Design and Testing of Decisional Autonomy and Cooperation in Cyber-Physical Systems ........................................................................................................................................... 479
  Francesca Saglietti, David Föhrweiser, Stefan Winzinger, and Raimar Lill

Cloud Technologies for the Internet of Things: Defining a Research Agenda Beyond the Expected Topics ........................................................................................................................................... 484
  Antero Taivalsaari and Tommi Mikkonen

Author Index ........................................................................................................................................................................... 489
