IEEE Secure Development Conference

SecDev 2017

Table of Contents

Message from the General Chair.................................................................viii
Message from the Program Chair...............................................................ix
Message from the Tutorial Chair...............................................................x
Conference Committees...........................................................................xi
Panel: Building a Business around Secure Development..........................xiii
Keynotes....................................................................................................xv
Poster Listings.........................................................................................xviii

Tutorials

Hands-On Tutorial: Auditing Static Analysis Alerts Using a Lexicon & Rules .................................................................1

Lori Flynn, David Svoboda, and William Snively

Automated Assessment Tools and the Software Assurance Marketplace
(SWAMP) ........................................................................................................3

James A. Kupsch

Input Handling Done Right: Building Hardened Parsers Using
Language-Theoretic Security.......................................................................4

Prashant Anantharaman, Michael C. Millian, Sergey Bratus,
and Meredith L. Patterson

Java Deserialization Vulnerabilities and Mitigations ........................................6

Robert C. Seacord

Angr - The Next Generation of Binary Analysis ...........................................8

Fish (Ruoyu) Wang and Yan Shoshitaishvili
Session 1: Helping Developers

A Machine Learning Approach to SDL .................................10
   Raghudeep Kannavara, Gilad Gressel, Damilare Fagbemi, and Richard Chow

Improving Attention to Security in Software Design with Analytics and Cognitive Techniques ..................................................16
   Jim Whitmore and William Tobin

Developers Need Support, Too: A Survey of Security Advice for Software Developers ...........................................................................................................................................22
   Yasemin Acar, Christian Stransky, Dominik Wermke, Charles Weir,
   Michelle L. Mazurek, and Sascha Fahl

Session 2: Preventing Vulnerabilities Systematically

A Software Solution for Hardware Vulnerabilities ........................................27
   Komail Dharsee, Ethan Johnson, and John Criswell

ASLR: How Robust Is the Randomness? ......................................................34
   Jonathan Ganz and Sean Peisert

Layering Security at Global Control Points to Secure Unmodified Software .................................................................42
   Scott Ruoti, Kent Seamons, and Daniel Zappala

Empirical Studies on the Security and Usability Impact of Immutability .................................................................50
   Sam Weber, Michael Coblenz, Brad Myers, Jonathan Aldrich,
   and Joshua Sunshine

Session 3: Program Support to Improve Security

Securing Dataverse with an Adapted Command Design Pattern ..................................................54
   Gustavo Durand, Michael Bar-Sinai, and Mercé Crosas

Program Analysis of Cryptographic Implementations for Security ..................................................61
   Sazzadur Rahaman and Danfeng (Daphne) Yao

FaCT: A Flexible, Constant-Time Programming Language ..................................................69
   Sunjay Cauligi, Gary Soeller, Fraser Brown, Brian Johannesmeyer,
   Yunlu Huang, Ranjit Jhala, and Deian Stefan

Something Is Better Than Everything: A Distributed Approach to Audit Log Anomaly Detection ..................................................77
   Isis Rose, Nicholas Felts, Alexander George, Emily Miller, and Max Planck
Posters

Evaluation of Software Vulnerabilities in Vehicle Electronic Control Units .................................................. 83
    Jesse Edwards, Ameer Kashani, and Gopalakrishnan Iyer

Creating Abuse Cases Based on Attack Patterns: A User Study ................................................................. 85
    Imano Williams and Xiaohong Yuan

Author Index ...................................................................................................................................................... 87
