Workshop on Knowledge Acquisition, Reuse and Evaluation  
KARE

Workshop KARE Editorial Message

Knowledge Management (KM) is one of the key progress factors in organizations. It aims at capturing explicit and tacit knowledge of an organization in order to facilitate the access, sharing, and reuse of that knowledge as well as creation of new knowledge and organizational learning. KM must be guided by a strategic vision to fulfill its primary organizational objectives: improving knowledge sharing and cooperative work inside the organization; disseminating best practices; improving relationships with the external world; preserving past knowledge of the organization for reuse; improving the quality of projects and innovations; anticipating the evolution of the external environment; and preparing for unexpected events and managing urgency and crisis situations. Several techniques can be considered, according to the type of organization, its needs and its culture: knowledge-based approaches, document-based approaches, workflow-based approaches, CBR-based approaches, CSCW and cooperative approaches, ontology-based approaches, corporate Semantic Webs, Semantic Web Services approaches, Web-based approaches, agent-based approaches, distributed OMs, etc. Several scenarios of KM can be tackled through OMs: project memory, skills management, communities of practice, strategic or technological watch, etc.

This workshop will focus on the theoreticians and practitioners concerned with developing methods and systems that assist the knowledge management process and assessing the suitability of such methods. Thus, the workshop includes all aspects of acquiring, modeling and managing knowledge, and their role in the construction of knowledge-based systems. Knowledge acquisition still remains the bottleneck for building a knowledge based system. Reuse and sharing of knowledge bases are major issues and no satisfactory solutions have been agreed upon yet. There is a wide range of research. Much of the work in this field has been knowledge acquisition. The advent of the age of digital information has brought the problem of knowledge reuse and knowledge evaluation. Our ability to analyze, evaluate and assist user in reusing knowledge present a great challenge of the next years. A new generation of computational techniques and tools is required to support the acquisition, the reuse and the evaluation of useful knowledge from the rapidly growing volume of information. All of these are to be discussed in this workshop.

We received 15 papers from different countries around the world (Japan, France, Italy, Tunisia, South Korea, etc.): this second edition of the KARE workshop can be considered fully international. After a peer review process in which all the papers were reviewed at least by three reviewers, 8 papers were selected for presentation. The accepted papers are grouped in 2 presentation sessions which cover Knowledge Management fields.

We hope that you enjoy attending the first KARE workshop and that you find in its sessions and proceedings a challenging resource for your present and future research work.

November 2009
Davy Monticolo, University of Technology UTBM, France
Paolo Ceravolo, University of Milan, Italy
Vincent Hilaire, University of Technology UTBM, France
KARE Chairs
Paolo Ceravolo, University of Milan, Italy
Vincent Hilaire, UTBM, France
Davy Monticolo, UTBM, France

KARE Program Committee
Hamid R. Arabnia, University of Georgia, USA
Tomas Arredondo, Universidad Tecnica Federico Santa Maria (UTFSM), Valparaiso, Chile
Azita Bahrami, Armstrong Atlantic State University, Savannah, Georgia, USA
Djamal Benslimane, University of Lyon, France
Ismail Biskri, Université de Québec à Trois Rivières, Canada
Valerie Camps, Universite Paul Sabatier, France
Laurence Capus, Université Laval (Quebec), Canada
Nathalie Chaingaud, INSA Rouen, France
Claudia D'Amato, Università degli Studi di Bari, Italy
Ernesto Damiani, University of Milan, Italy
John Domingue, The Open University, UK
David Faure, Thales R&T, France
Fabien Gandon, INRIA, France
Samuel Gomes, UTBM, France
Michael Grüninger, University of Toronto, Canada
Miguel Ángel Gómez-Nieto, University of Córdoba, Spain
William Grosky, University of Michigan-Dearborn, USA
Susan Haller, State University of New York at Potsdam, USA
Vincent Hilaire, UTBM, France
Dusan Husek, Academy of Sciences of the Czech Republic, Czech Republic
Mustafa Jarrar, University of Birzeit, Palestine
Jean-Philippe Kotowicz, INSA Rouen, France
Abderrafiaa Koukam, UTBM, France
Lenka Lhotska, Czech Technical University, Prague
Gaëlle Lortal, Thales R&T, France
Ronald Maier, University of Innsbruck, Austria
Ashok Mallya, Veraz Networks, USA
Andy Marsh, Director, HoIP CIC, UK
Jean-Charles Marty, University of Savoie, France
Matsui Masayoshi, National Institute of Advanced Industrial, Science and Technology, Japan
Nada Matta, University of Technology UTT, France
Sheila McIlraith, University of Toronto, Canada
Brahim Medjahed, University of Michigan, USA
Abhijit Mitra, Indian Institute of Technology, India
Adrian Mocan, DERI Innsbruck, Austria
Bernard Moulin, Université Laval (Quebec), Canada
Pit Pichappan, Annamalai University, India
Tomas Pitner, Masaryk University of Brno, Czech Republic
Monica Scannapieco, University of Rome, Italy
Carla Simone, University of Milano-Bicocca Italy
Monika Solanki, Imperial College London, UK
Ritu Soni, Guru Nanak Girls College, India + Kurukshetra, University, India
André Trudel, Acadia University, Canada
Somkait Udomhunsakul, King Mongkut’s Institute of Technology, Ladkrabang, Thailand
Marja Naaranoja Vaasa, University of Applied Sciences, Finland
Martin Wolpers, Fraunhofer FIT, Germany
Mariemma Yague, University of Malaga, Spain
Laurence T. Yang, St. Francis Xavier University, Canada
Chen Yuehui, University of Jinan, China
Cecilia Zanni, INSA Strasbourg, France
Antonio Zilli, eBusiness Management Sector - Scuola Superiore ISUFI – University of Salento, Italy
Ales Zivkovic, University of Maribor, Slovenia
