Message from SIT Track Chairs

Track on Signal and Image Technology

The domain of Signal and Image Technology (SIT) is a very active research area with extremely promising applications and research outcomes. The steering committee of SITIS conference recognized few years ago the great research potential of this area by placing the SIT track as one of two main tracks of the conference. A large community worldwide is involved in SIT and developing new algorithms and applications as concrete solutions in different disciplines including education, health, security, energy, cultural heritage, robotics, space, etc. Clearly, in today's society visual information is becoming increasingly important and this is reflected in the submissions we have received for the track.

The SIT track for the SITIS 2014 International Conference has received 68 submissions from around 32 countries on a large variety of areas. Each paper was assigned to 3 or 4 members of the program committee for review, and at least 2 reviews were recorded for each paper. We have selected 28 papers for presentation (40% rate of acceptance). All accepted papers had a positive review score, which shows that only good quality have been accepted. These accepted papers have been organized in a total of 7 sessions. The sessions span on main disciplines of SIT including vision, signal processing, pattern recognition, applications and technologies.

We would like to thank the international program committee for helping in the review process by providing timely and very constructive feedbacks. This program committee was composed of around 100 international reviewers from more than 35 countries. Their valuable comments and feedback have ensured and maintained the high quality of papers selected for presentation and publication in the conference proceedings. We also thank all the authors of accepted papers for their excellent contributions and look forward to meeting them at the conference. We hope this conference will provide an opportunity for all the participants for fruitful discussions on the scientific and relationship aspects.

Enjoy the conference and enjoy the beautiful and historical city of MARRAKECH.

October, 2014
