## Table of Contents

- **Message from the Conference Chairs** ................................................................. xvii
- **Message from the Program Chair** ........................................................................ xix
- **Program Committee** ........................................................................................... xx
- **Organizing Committee** ........................................................................................ xxv
- **Hosting and Sponsoring Organizations** ............................................................... xxvii
- **Keynote 1** ............................................................................................................ xxviii
- **Keynote 2** ............................................................................................................. xxix

### 1. AITA Workshop Track

- An Efficient Key Distribution Method Applying to OMA DRM 2.0 with Device Identifier ................................................................. 3
  - Zonghua Liu, Guangqing Liu, and Byungwook Lee
- Classification of Facial Expression Using SVM for Emotion Care Service System .................................................................................... 8
  - Byungsung Lee, Junchul Chun, and Peom Park
- Comparison of the Mechanisms of the Zigbee’s Indoor Localization Algorithm ................................................................. 13
  - Angela Song-je Noh, Woong Jae Lee, and Jin Young Ye
- Managing Quality Level for Developing Information Security System Adapting QFD .......................................................................................... 19
  - Pauline Kongsuwan, Sangmun Shin, and Myeonggil Choi
2. Algorithms Track

A Novel Method for All Solutions SAT Problem .................................................................41
  Xiuqin Wang, Guangsheng Ma, and Hao Wang

A Tabu Search and Ant Colony System Approach for the Capacitated Location-Routing Problem .................................................................46
  Lyamine Bouhafs, Amir Hajjam, and Abderraflaa Koukam

An Adaptive Performance Management Method for Failure Detection ........................................51
  Ke Liang, Xingshe Zhou, Kailong Zhang, and Ruiqing Sheng

Combined Fuzzy State Q-learning Algorithm to Predict Context Aware User Activity under Uncertainty in Assistive Environment .................................................................57
  Feki Mohamed Ali, Sang Wan Lee, Zenn Bien, and Mounir Mokhtari

New Approaches for Software Watermarking by Register Allocation ..................................................63
  Hakun Lee and Keiichi Kaneko

Placing a Liaison between Two Members of the Same Level in an Organization Structure of a Complete Binary Tree .................................................................69
  Kiyoshi Sawada

Study on Ontology Partition Based on Ant Colony Algorithm .................................................................73
  Zhang Lei, Xia Shixiong, Xia Zhanguo, and Zhou Yong

The Complexity of the Evolution of Graph Labelings ........................................................................79
  Geir Agnarsson, Raymond Greenlaw, and Sanpawat Kantabutra

The Complexity of the Grid Wireless Mobility Model ........................................................................85
  Sanpawat Kantabutra and Pattama Longani

3. Artificial Intelligence Track

A Comparison of Iterative Repair Strategies for Earth Observing Satellites Imaging Scheduling .................................................................93
  Guo Yu-hua, Jing Ning, Li Jun, and Wang Jun

A Formal Approach for Design of Agent Based Earthquake Management System (EMS) .................................................................99
  Sarmad Sadik, Alade Rahman, Arshad Ali, H. Farooq Ahmad, and Hiroki Suguri

A New Classifier to Deal with Incomplete Data ........................................................................105
  Jun Wu, Yo Seung Kim, Chi-Hwa Song, and Won Don Lee

A Sound and Complete Reified Temporal Logic ........................................................................111
  Guoxing Zhao, Jixin Ma, Fuxing Shen, and Miltos Petridis
Application of Multi-layer Feed-forward Neural Network in Fault Diagnosis
Based on FBP Algorithm..................................................................................................................117
  Zhang Bin, Yan Jun, and Zhang Wei

Clustering ICT Indicators of Bhutan using Two Level HSOM Algorithm ..................................................121
  Tshering and Somjit Arch-int

Comparison of Direct and Incremental Genetic Algorithm for Optimization
of Ordinal Fuzzy Controllers .................................................................................................................128
  Khairulmizam Samsudin, Faisul Arif Ahmad, Syamsiah Mashohor, and Norfadzilah Mohd Latif

Lipschitz Continuity of Approximate Reasoning .....................................................................................135
  Takashi Mitsuishi, Takanori Terashima, Toshimichi Homma, and Yasunari Shidama

On Relaxing and Steady State Genetic Methods for Satellite Imaging
Scheduling .................................................................................................................................................141
  Jin Xiao-shan, Li Jun, and Jing Ning

The Study of a Financial Crisis Prediction Model based on XBRL ..........................................................147
  Fengyi Lin, Deron Liang, and Shih-Jung Chiu

Reinforcement Distribution in a Team of Cooperative Q-learning Agents ..................................................154
  Zahra Abbasi and Mohammad Ali Abbasi

4. Audio and Video Encoder/Decoder Technology Track
A New Vocoder based on AMR 7.4kbit/s Mode in Speaker Dependent Coding
System ....................................................................................................................................................163
  Vu Thi Lan Huong, Byung-Jae Min, Dong-Chul Park, and Dong-Min Woo

5. Collaborative Computing Track
AINAN: Collaborative Application for Protein Visualization & Analyses .............................................171
  Rauf Malick, Usama Khanzada, Athar Abbas, Waheed Iqbal, and Kamran Azim

6. Communication Systems and Networks Track
A New PAPR Reduction Technique for OFDM-WLAN in 802.11a Systems ...........................................179
  C. Pradabpet, K. Eupree, S. Chivapreecha, and K. Dejhan

A Two-Dimensionality Model for Providing End-to-End QoS CAC ......................................................185
  Jiazheng Wang and Xiuhua Fu

Analytical Modeling of Task Scheduling for Master-Slave Super Hypercube Architecture .......................190
  Maryam Amiripour and Hamid Abachi

Consideration of User Preference on Internet-based Overlay Network ...............................................195
  Taewan Gu, Jae-Bong Yoo, and Chan-Young Park

Design of a Network Coverage Analyzer for Roadside-to-Vehicle Telematics Networks .........................201
  Junghoon Lee
LMCM: Layered Multiple Chaining Model for Authenticating Multicast Streams ................................................................................................................................. 206
Jinxin He, Gaochao Xu, Xiaodong Fu, Zhiguo Zhou, and Jianhua Jiang

Mathematical Modelling for the Design of an Edge Router ................................................................................................................................. 212
Partha Bhattacharjee and Goutam Sanyal

Message Sequence Charts to Specify the Communicating Threads for Concurrent Discrete Wavelet Transform Based Image Compression and a Verification Analysis ......................................................................................................................... 218
Kamrul Hasan Talukder and Koichi Harada

Neuro Fuzzy Model Predictive Control of AQM Networks Supporting TCP Flows ................................................................................................................................. 226
A.R. Maghsoudlou, R. Barzamini, S. Soleimanpour, and J. Jouzdani

Prolonging Sensor Network Lifetime with Initial Energy Level Assignment ................................................................................................................................. 231
Lijie Ren, Zhongwen Guo, and Renzhong Ma

Routing in General Incomplete Star Interconnection Network ................................................................................................................................. 237
Bao-Xing Chen and Wen-Jun Xiao

Towards Formal Modeling and Analysis of Networks of Embedded Medical Devices in Real-Time Maude ........................................................................................................................................ 241
Peter Csaba Ölveczky

7. Component-Based Software Engineering Track

An MDA Approach to Byte Code Level Cross-Compilation ................................................................................................................................. 251
Arno Puder, Sascha Haeberling, and Rainer Todtenhoefer

Customer Value-based HW/SW Partitioning Decision in Embedded Systems ................................................................................................................................. 257
Neunghoe Kim, Taek Lee, Donghyun Lee, Keun Lee, and Hoh Peter In

Early-Life Cycle Reuse Approach for Component-Based Software of Autonomous Mobile Robot System ........................................................................................................................................ 263
Dayang N.A. Jawawi, Safaai Deris, and Rosbi Mamat

The Implementation and Execution Framework of a Role Model Based Language, EpsilonJ ........................................................................................................................................ 269
Supasit Monpratarnchai and Tamai Tetsuo

8. Cryptography and Network Security Track

A Multisecret Sharing Threshold Scheme ................................................................................................................................. 279
Yanyan Zhang

A Practical Certified E-Mail System with Temporal Authentication Based on Transparent TSS ........................................................................................................................................ 285
Dongmei Liu, Sihan Qing, Pengfei Li, and ChunYang Yuan

Effect of Security Increment to Symmetric Data Encryption through AES Methodology ........................................................................................................................................ 291
Md. Nazrul Islam, Md. Monir Hossain Mia, Muhammad F. I. Chowdhury, and M.A. Matin
An Improved ID-based Restrictive Partially Blind Signature Scheme ..................................................295
Shangping Wang, Pei Han, Yaling Zhang, and Xiaofeng Wang

DHA-KD: Dynamic Hierarchical Agent Based Key Distribution in Group Communication .................................................................301
M. Amir Moulavi, Jalal A. Nasiri, Behnam Bahmani, Hossein Parvar, M. Sadeghizadeh,
and Mahmoud Naghibzadeh

ImprovedNonceConstructionSchemeforAESCCMPToEvadeInitialCounterPrediction ...................................................................................................................................................307
Mansoor Ahmed Khan, Ahmad Raza Cheema, and Aamir Hasan

MaliciousCodeDetectionArchitectureInspiredbyHumanImmuneSystem ........................................312
Mohd Fadzli Marhusin, David Cornforth, and Henry Larkin

ModularMatrixCipherandItsApplicationinAuthenticationProtocol ........................................................................................................318
Bao Ngoc Tran and Thuc Dinh Nguyen

Multi-signers Strong Designated Verifier Signature Scheme ........................................................324
Yaling Zhang, Jing Zhang, and Yikun Zhang

Security Analysis of Micali’s Fair Contract Signing Protocol by Using
Coloured Petri Nets ..................................................................................................................................................329
Panupong Sornkhom and Yongyuth Permpongpanich

Security Enhancements for Privacy and Key Management Protocol in IEEE 802.16e-2005 .........................................................335
Ayesha Altaf, M. Younus Javed, and Attiq Ahmed

Type Flaw Attacks and Prevention in Security Protocols ........................................................................................................340
Juan Wang, Jingwei Zhang, and Huanguo Zhang

Vulnerabilities Exposing IEEE 802.16e Networks to DoS Attacks: A Survey ........................................344
Sheraz Naseer, Muhammad Younus, and Attiq Ahmed

Vulnerabilities of UMTS Access Domain Security Architecture ........................................................................................................350
Muzammil Khan, Attiq Ahmed, and Ahmad Raza Cheema

A Photonic-based Random Number Generator for Cryptographic Application ..................................356
N.M. Thamrin, G. Witjaksono, A. Nuruddin, and M.S. Abdullah

9. Data Mining and Knowledge Discovery Track

A Feature Selection for Malicious Detection ..............................................................................................365
Yingxu Lai

A Study of Classification Algorithm for Data Mining Based on Hybrid Intelligent Systems .................................371
Gang Wang, Chenghong Zhang, and Lihua Huang

A Two-Stage Clustering Algorithm for Multi-type Relational Data ..........................................................................................376
Ying Gao, Da-you Liu, Cheng-min Sun, and He Liu

An Effective Method for Chinese Related Queries Recommendation ......................................................381
Shen Xiaoyan, Cheng Bo, Chen Junliang, and Meng Xiangwu
Decision Tree-Based Model for Automatic Assignment of IT Service Desk Outsourcing in Banking Business ................................................................. 387

Padej Phomasakha Na Sakolnakorn and Phayung Meesad

Detecting Semantic Mapping of Ontologies with Inference of Description Logic ..................................................................................... 393

Wenhui Ma, Guangping Xu, Gang Wang, and Jing Liu

Improve Frequent Closed Itemsets Mining over Data Stream with Bitmap .......................................................................................... 399

Haifeng Li and Hong Chen

Mining Approximate Closed Frequent Itemsets over Stream ............................................................................................................. 405

Haifeng Li, Zongjian Lu, and Hong Chen

Adaptive Evolvement of Query Plan Based on Low Cost in Dynamic Grid Database ..................................................................................... 411

Naijing Hu, Yuan Luo, and Yingying Wang

Prioritizing Default Rules Embedded in Description Logic Knowledge Base .......................................................................................... 416

Shaohua Liu, Junsheng Yu, Yinglong Ma, Xu Zhang, Xiaoming Liu, and Hansheng Su

Stock Price Time Series Prediction using Neuro-Fuzzy with Support Vector Guideline System ................................................................................. 422

Phayung Meesad and Tong Srikhacha

Using Social Network Analysis to Better Understand the Dependencies in UML Use Cases Collection .......................................................... 428

Phanarut Srichetta and Songsri Tangsripairoj

Privacy Preserving of Associative Classification and Heuristic Approach .......................................................................................... 434

Nattapon Harnsamut, Juggapong Natwichai, and Bowonsak Seisungsittisunti

A Sequential Pattern Mining Algorithm Based on Improved FP-tree .................................................................................................. 440

Yi Sui, Fengjing Shao, Rencheng Sun, and Jinlong Wang

10. E-Commerce and its Applications Track

E Commerce - Forward and Reverse Auction - A Managerial Tool to Succeed over Business Competitiveness .................................................. 447

D. Ganguly and Samit Chakraborty

Meta-heuristic Enabled MAS Optimization in Supply Chain Procurement .......................................................................................... 453

Xia Zhanguo, Wang Ke, and Wang Zhixiao

11. Embedded Systems Track

ICLS : Intelligent Cricket-based Location Tracking System Using Sensor Fusion .......................................................................................... 461

Ho Min Jung, Byung Ki Kim, Wan Yeon Lee, and Young Woong Ko

Specifying and Verifying Timing Properties of a Time-triggered Protocol for In-vehicle Communication .................................................. 467

Bo Zhang
12. Image, Speech, and Signal Processing Track

A Genetic Algorithm-aided Hidden Markov Model Topology Estimation for Phoneme Recognition of Thai Continuous Speech ................................................................. 475
  Pattana Bhuriyakorn, Proadpran Punyabukkana, and Atiwong Suchato

A New Auto-Focusing Method Based on WBDCT for Many Object Situations ...................................................... 481
  Ke Han, Xue-mei Jiang, Quan Feng, and Xiu-chang Zhu

A Novel Voice Morphing System Using Bi-GMM for High Quality Transformation ......................................................................................................................... 485
  Ning Xu, Xi Shao, and Zhen Yang

A Secure Scheme for Image Transformation ......................................................................................................................... 490
  Samir K. Bandyopadhyay, Debnath Bhattacharyya, Debashis Ganguly,
  Swarnendu Mukherjee, and Poulami Das

Efficient Object Recognition Using Parametric Eigenspace under Influence of Noise and Occlusion .............................. 494
  Pravinkumar S. Revankar, Prabir Kumar Biswas, and Sonali N. Deshpande

Image Preprocessing and Trajectory Feature Extraction based on Hidden Markov Models for Sign Language Recognition .................................................................................. 501
  Duong Van Hieu and Supot Nitsuwat

Modified Method for Denoising Color Images using Fuzzy Approach .................................................................................. 507
  Madhu S. Nair and M. Wilscy

Novelty towards Hybrid Segmentation of Coronary Artery in CT Cardiac Images ................................................................. 513
  Valliappan Raman and Patrick Then

Static Hand Gesture Recognition and its Application based on Support Vector Machines .................................................. 517
  Yun Liu, Zhijie Gan, and Yu Sun

Face Detection Based on Skin Gaussian Model and KL Transform ...................................................................................... 522
  Wang Chuan-xu and Li Zuo-yong

Face Detection using BP Network Combined with Gabor Wavelet Transform .................................................................................. 526
  Wang Chuan-xu and Li Xue

A New Kind of Super-Resolution Reconstruction Algorithm Based on the ICM and the Constrained Cubic Spline Interpolation .................................................................................................. 530
  Zhang Xiang-guang

Background Subtraction Enhancement using Segmentation ................................................................................................. 535
  Kyongil Yoon

13. Information Assurance Track

Information Value Evaluation Model for ILM .................................................................................................................. 543
  Hai Jin, Muzhou Xiong, and Song Wu
14. Internet Technology Track

SMILE Visualization with Flash Technologies .................................................................551
Anucha Tungkasthan, Pittaya Poompuang, and Wichian Premchaiswadi

Bring Precision and Access Control to Business Document Search ..........................557
Somchai Chatvichienchai and Katsumi Tanaka

Byte Code Transformations using XSL Stylesheets ...................................................563
Arno Puder

COS: A Frame Work for Clustered off-line Search ..................................................569
Sree Harsha Totakura, S. Venkata Nagendra, Rohit Indukuri, and V. Vijayasherly

Image Authentication Schemes against Key-Logger Spyware ..................................574
M.N. Doja and Naveen Kumar

Information Flow based Ontology Mapping .................................................................580
Ye Liang, Hong Bao, and Hong-Zhe Liu

Multi-Agent System Model of a BitTorrent Network .............................................586
Enrique Costa-Montenegro, Juan C. Burguillo-Rial, Pedro S. Rodriguez-Hernandez,
Francisco J. Gonzalez-Castano, Maria Curras-Parada, Patricia Gomez-Rana,
and Juan P. Rey-Souto

15. Mobile/Wireless/Ad-hoc Networks Track

A Crossover Game Routing Algorithm for Wireless Multimedia Sensor Networks .................................................................595
Zongwu Ke, Layuan Li, and Nianshen Chen

Accuracy of an Icing On-line Monitoring System ...................................................600
Huang Xinbo and Sun Qindong

Adaptive Self-Organizing Overlay Network for Car-to-Car Communications ........605
Mikio Aoyama and Hiroshi Takeichi

Multicasting Support for NEMO based on ODMRP .............................................611
Seong-Yee Phang, Chee-Min Yeoh, HoonJae Lee, and Hyotaek Lim

QoS Protocol Verification using Petri-Net for Seamless Mobility in a Ubiquitous Environment: A Case Study ..........................617
Dalju Lee and Jongmoon Baik

The Upper Bound of Coverage on Fixed Energy Budget in Wireless Sensor Networks .................................................................623
Fang Wang, Lisheng Ren, and Guija Teng

Omni-Directional Antenna for Wireless Access Point ..........................................627
Suwat Pattamavorakun, Wuttipol Wanarsup, and Siwarin Pattamavorakun
16. Natural Language Processing Track

A New Hybrid Farsi Text Summarization Technique Based on Term Co-Ocurrence and Conceptual Property of the Text ...............................................................635
Azadeh Zamanifar, Behrouz Minaei-Bidgoli, and Mohsen Sharifi

Collation Strategy Based on Heuristics Chart for Myanmar Language ..............................................640
Yuzana and Khin Marlar Tun

17. Neural Networks and Genetic Algorithms Track

A New Model of Mine Hoist Fault Diagnosis Based on the Rough Set Theory ..................................................649
Xia Zhanguo, Wang Zhixiao, Wang Ke, and Guan Hongjie

M. Phankokkruad and K. Woraratpanya

Classification of Bio-Optical Signals using Soft Computing Tools ..............................................................661
G. Subramanya Nayak, C. Puttamadappa, Akshata Kamath, B. Raja Sudeep, and K. Kavitha

Design of MLP using Evolutionary Strategy with Variable Length Chromosomes ........................................664
Abbas Sarraf Shirazi and Tahereh Seyedena

Equalization for a Wireless ATM Channel with a Recurrent Neural Network Pruned by Genetic Algorithm .................................................................670
Dong-Chul Park

18. Operating Systems Track

ESnapII: A Writable Dependent Snapshot System with Shared Cache .........................................................677
Guangjun Xie, Lu Qi, Feng Wang, Gang Wang, XiaoGuang Liu, and Jing Liu

19. Parallel and Distributed Computing Track

A Formal Model of Dynamic Resource Allocation in Grid Computing Environment ........................................685
Leila Ismail, Bruce Mills, and Alain Hennebelle

A Visualization Portal for a Tsunami Warning System on a Distributed Environment .....................................694
Pemjit Aphimaeteethomrong and Veera Muangsin

Aggregate Congestion Control for Peer-to-Peer File Sharing Applications ..............................................700
Wei Li, Shanzhi Chen, Yaning Liu, and Xin Li

An Efficient Parallel Eye Detection Algorithm on Facial Color Images .......................................................706
Jalal A. Nasiri, M. Amir Moulavi, Sepideh Nazemi Gelyan, Hossein Deldari, H. Sadoghi Yazdi, and A. Eshghi Shargh

An Optimal Data Center Availability and Investment Trade-Offs ...........................................................712
Montri Wiboonrat
Fast Preemptive Task Scheduling Algorithm for Homogeneous and Heterogeneous Distributed Memory Systems ................................................................. 720
  Maruf Ahmed, Sharif M.H. Chowdhury, and Masud Hasan
Implementation of Parallel Algorithms for LUC Cryptosystem .......................................................... 726
  Zulkarnain Md Ali, Mohamed Othman, Mohd Rushdan Mohd Said, and Mohammad Nasir Sulaiman
Parallel Implementation of the Novel Approach to Genome Assembly ........................................... 732
  Jacek Blazewicz, Marta Kasprzak, Aleksandra Swiercz, Marek Figlerowicz, Piotr Gawron, Darren Platt, and Łukasz Szajkowski

20. Service Oriented Computing Track

Model Checking for Web Service Flow Based on Annotated OWL-S ......................................................... 741
  Rujuan Liu, Changjun Hu, and Chongchong Zhao
Web Services Communication Model in Telecom Domain ........................................................................ 747
  Cheng Bo, Shen Xiaoyan, Meng Xiangwu, and Chen Junliang
An Ensemble of Complexity Metrics for BPEL Web Processes .................................................................. 753
  Reza Meimandi Parizi and Abdul Azim Abdul Ghani
A Preliminary Study on Portable Interceptor Mechanism to SOAP ............................................................. 759
  Chen-Liang Fang, Deron Liang, Fengyi Lin, and Chien-Cheng Lin
Enhancing Service-Side QoS Monitoring for Web Services ................................................................. 765
  Natee Artaiam and Twittie Senivongse

21. Software Specification and Architecture Track

A Review of Software Risk Management for Selection of Best Tools and Techniques ................................... 773
  Md. Forhad Rabbi and Khan Olid Bin Mannan
A Z-Specification of Classification and Relationships between Usecases .................................................. 779
  Durga Prasad Kakollu and B.D. Chaudhary
An Alternative Model for ERP Maintenance Strategy ............................................................................ 785
  Muhammad Rofi Imtihan, Mohd. Salihin Ngadiman, and Habibollah Haron
An Application Generator Framelet ........................................................................................................ 794
  Inggriani Liem and Yohanes Nugroho
An Approach to Modeling Software Safety ................................................................................................ 800
  M. Ben Swarup and P. Seetha Ramaiah
Architecture-aware Partial Order Reduction to Accelerate Model Checking of Networked Programs .............. 807
  Cyrille Artho, Watcharin Leungwattanakit, Masami Hagiya, and Yoshinori Tanabe
Conceptual Modeling for Safety Critical Computer Systems ...................................................................... 814
  P. Seetha Ramaiah, M. Ben Swarup, and K. Raja Kumar
Eclipse Project and Resource Tracking Plug-in ......................................................................................... 820
  Kevin Li and Dwight Deugo
Identification and Extraction of Design Pattern Information in Java Program ...........................................828
  Chengwan He, Zheng Li, and Keqing He
Research on UML-based Modeling of Workflow Manage System ..........................................................835
  Guan Hong-jie, Meng Fan-rong, and Xia Zhan-guo
Software Engineering Issues in Developing a Context-aware Exhibition Guide System ........................................840
  Jongmyung Choi and Hyun-Joo Moon
The Prototype of the Massive Events Streams Service Architecture and its Application ................................846
  Kyungeun Park, Yanggon Kim, Juno Chang, Daewoong Rhee, and Jinkyu Lee
Tools and Techniques for Model Checking Networked Programs .............................................................852
  Cyrille Artho, Watcharin Leungwattanakit, Masami Hagiya, and Yoshinori Tanabe
Multi Readers Detection in Adaptive RFID Middleware .............................................................................858
  Siti Zaiton Mohd Hashim, Mardiyono, Wan Mohd Nasir Wan Kadir, and Nurulhaini Anuar

22. Software Testing Track
A Comparative Evaluation of Tests Generated from Different UML Diagrams ........................................867
  Supaporn Kansomkeat, Jeff Offutt, Aynur Abdurazik, and Andrea Baldini
Finding Causes of Software Failure Using Ridge Regression and Association Rule Generation Methods ........................................873
  Saeed Parsa, Mojtaba Vahidi-Asl, and Somaye Arabi Naree
Test Sequence Generation from UML Sequence Diagrams .....................................................................879
  Philip Samuel and Anju Teresa Joseph
Testing Component-Based Real Time Systems ...............................................................................................888
  Rachid Bouaziz and Ismail Berrada
Detecting Feature Interactions in Home Appliance Networks .....................................................................895
  Pattara Leelaprute, Takafumi Matsumo, Tatsuhiro Tsuchiya, and Tohru Kikuno

23. Visual and Multimedia Computing Track
A Traffic Modeling Method for MMOG ........................................................................................................907
  Shi Xiang-bin, Du Ling, Liu Fang, Li Bao-long, and Chen Xian-min
An Algorithm of Level of Detail Terrain .......................................................................................................912
  Shi Xiang-bin, Liu Fang, Du Ling, Bao Siqin, and Chen Xianmin
An Interest Management Mechanism Based on N-Tree ...........................................................................917
  Shi Xiang-bin, Wang Yue, Li Qiang, Du Ling, and Liu Fang

24. Web-Based Applications Track
A Hierarchical Cache Scheme for the Large-scale Web Search Engine ....................................................925
  Sungchae Lim and Joonseon Ahn
Dynamic Data Feed to Bayesian Network Model and SMILE Web Application .......................................931
  Nipat Jongsawat, Pittaya Poompuang, and Wichian Premchaiswadi
E-Tax Invoice System Using Web Services Technology: A Case Study of the Revenue Department of Thailand ................................................................. 937
   Sukanya Suwisuthikasem and Songsri Tangsripairoj
Knowledge Representation and Query Process Based-on Semantic Web Technologies ..................................................................................................................... 943
   Chenghong Zhang, Songran Liu, Zhengchuan Xu, Zhuojun Gu, and Xiaoling Wang
Ranking of Indian E-commerce Web-applications by Measuring Quality Factors ........................................................................................................... 949
   Priyanka Tripathi, M. Kumar, and Namita Shrivastava
Research on Mechanism of Agricultural FAQ Retrieval Based on Ontology ................................................................. 955
   Fang Wang, Guifa Teng, Lisheng Ren, and JianBin Ma
Intelligent Personalization Job Web Site ................................................................................................................................. 959
   Wuttipol Wanarsup, Suwarin Pattamavorakun, and Suwat Pattamavorakun

25. Papers Presented at SNPD 2007
A Class of SIR Epidemic Model with Saturation Incidence and Age of Infection ........................................................................................................... 967
   Junyuan Yang, Fengqin Zhang, and Xiaoyan Wang
A Hybrid Text Classification Model based on Rough Sets and Genetic Algorithms ........................................................................................................... 971
   Xiaoyue Wang, Zhen Hua, and Rujiang Bai

Mixing Protocol based on the Cooperation and the Parallelism for the Distributed Environment ................................................................. 981
   Belaid Saad, Francine Herrmann, Yann Lanuel, and Thomas Tamisier

Author Index ................................................................................................................................. 987
