Message from the EC 2016 Workshop Chairs

It is a great pleasure to welcome you to The Second International Workshop on Education in the Cloud, which will be held in Oxford, UK, 1 April 2016.

Cloud computing represents a major shift in the way we develop and deploy systems and services. In the educational sphere it provides the technical underpinning for the MOOC phenomenon, the incorporation of social media into curricula, and has accelerated the use of online learning resources in a variety of contexts. EC2016 aims at exploring different ways of using cloud computing to enable novel learning and teaching opportunities and overcome challenges and barriers in conventional approaches. All accepted papers were selected based on a peer review process.

We would like to express our sincere thanks to the program committee members for their continuous support, to the authors for their contributions, and to the colleagues who have served as reviewers for the submissions.

Shao Ying Zhu, University of Derby, United Kingdom
Collin Allison, University of St Andrews, United Kingdom
Richard Hill, University of Derby, United Kingdom
