Welcome to the 2015 IEEE Symposium on Security and Privacy Workshops (SPW). How time flies! It is hard to believe that this is the tenth year workshops have officially been held in conjunction with S&P. This year, we have five workshops of which two are new. It is thanks to the workshop organizers and their program committees that each workshop has a program designed to foster new ideas and discussions.

The 2015 IEEE Symposium on Security and Privacy Workshops are:

- IWPE: First International Workshop on Privacy Engineering
- GenoPri: Second International Workshop on Genome Privacy and Security
- LangSec: Second Workshop on Language Theoretic Security
- MoST: Mobile Security Technology (papers not collected in proceedings)
- W2SP: Web 2.0 Security and Privacy (papers not collected in proceedings)

I am very grateful to the many volunteers who have helped make the workshops possible. My utmost appreciation goes to the SPW organizing committee. Zachary Peterson served as the Workshops Vice Chair and has also been responsible for coordinating publicity both with the individual workshop organizers as well as with Anuja Sonalker, Publicity Chair for the Symposium. Our expenses have been carefully reviewed by the Workshops Treasurer and Symposium Co-Treasurer, Gabriela Ciocarlie, who has worked closely with Mark Gondree the Symposium Treasurer. As Workshops Publications Chair and Symposium Publications Co-Chair, Ashely Podhradsky managed our publications and awards, ensuring that submissions collected in the proceedings were coordinated with the Symposium Publications Chair, Kevin Butler, and Publications Co-Chair Sophie Engle.

The SPW steering committee provided timely and sagacious advice. Many thanks go to: Terry Benzel, Rob Cunningham, Sven Dietrich, and Deborah Frincke. They answered our questions and sometimes to raised them, all to the benefit of SPW.

Over the past ten years we have experimented with SPW's relationship with the Symposium: sometimes organized under the larger umbrella of the Symposium and at other points organized as a fully independent activity. We have learned a lot and have now developed a simplified framework under the Symposium that minimizes duplication of effort with respect to the critical infrastructure required for both events, while continuing to allow SPW to be independent with respect to the technical details of the program. The entire Symposium organizing committee has worked over the past year to ensure that all aspects of SPW have been supported. Those not mentioned above to whom I am grateful include: Sean Peisert, General Chair, and source of unwavering support and collaboration; Michael Locasto, Vice Chair; Jason Li, Donations Chair; Alvaro Cárdenas, Student Travel Committee Chair, Cliff Wang, Student Travel Committee Co-Chair; and Sean Whalen, Web Chair.

Thank you to the Officers of the Technical Committee on Security and Privacy. Patrick McDaniel, Chair; Ulf Lindqvist, Vice Chair; Yong Guan, Treasurer; and Hilarie Orman, who arranged for hosting of workshop websites on the Technical Committee's server.

Thanks also go to the IEEE and the IEEE Computer Society, and to the IEEE Computer Society Conference Publishing services for its support of the proceedings publication and for the creation of recognition plaques for exceptional workshop submissions. Paula Anderson answered questions regarding the Computer Society. Yvonne Lopez and Cara Candler, of Executivevents, ensured that our site arrangements and registration were trouble-free.
We are grateful for the generosity of the many donors whose support buoyed SPW: Cisco, the National Science Foundation (NSF), IBM Research, the Army Research Laboratory (ARL), Google, Qualcomm, Goldman Sachs, SEI CERT at Carnegie Mellon, TowerSec, the Networking and Information Technology Research and Development (NITRD) Program, VMware, Microsoft Research, Verisign, Oxford University Press, Symantec, Intelligent Automation, Inc. (IAI), the National Security Agency (NSA), Grammatech, and Springer.

It has been an honor to serve the workshops. Thank you to everyone who is attending SPW. Your participation will turn the workshops into a vibrant venue for the exchange of ideas that will stimulate you and your colleagues, both old and new, to pursue exciting new research topics.

Cynthia Irvine
Chair, 2015 IEEE Symposium on Security and Privacy Workshops
