Welcome Message from the Program Chair

Welcome to SSIRI 2008 – the Second IEEE International Conference of Secure System Integration and Reliability Improvement. The objective of the conference is to bring together researchers and practitioners and bridge the gap between state-of-art research and state-of-practice technologies. We provide a forum for the exchange of ideas related to the development of reliable, secure, and trustworthy systems in today’s volatile environment.

The technical program has two keynote addresses, 24 regular papers and 37 fast abstracts. They cover a broad spectrum including reliability, availability, and safety of software systems, requirements, architecture, design, UML, verification, testing, risk assessment, models, metrics, web applications, embedded systems, sensor networks, and component-based systems.

We would like to thank all the authors for sharing their ideas and results with us, and all the members of the Program Committee and reviewers for their help in evaluating and selecting high quality papers. Without their participation, the success of the conference would not be possible.

We thank you for attending the conference and hope that you enjoy the program we have prepared for you.

W. Eric Wong
