Table of Contents

General Chairmen's Message ........................................................................................................ v
Special Appreciation to Alabama Power ....................................................................................... v
Symposium Committee .................................................................................................................. vi
A Brief History of the Southeastern Symposium on System Theory ........................................ vii
SSST Steering Committee Members .......................................................................................... ix

Electromagnetics I

Perturbation Expansion for the Field Scattered by a Small Cylinder
in the Presence of a Neighboring Cylinder .................................................................................. 2
Y.M. Loh and R.W. Scharstein, The University of Alabama
Coupling between Two-Conductor Multi-Layer Shielded
Microstrip Transmission Line .................................................................................................. 6
A.Z. Elsherbeni, B. Mounneh, C.E. Smith, and H. Golestanian,
University of Mississippi
Simulation of Target Responses to High Frequency Ultra Wideband
Radar Signals Using the Physical Optics Impulse Response ....................................................... 11
B.J. Skinner, J.P. Donohoe, and F.M. Ingels, Mississippi State University
Quasi-Static Analysis of Microstrip Transmission Line Systems ............................................. 16
W.-L. Wu and R.K. Gordon, University of Mississippi

Electromagnetics II

Efficient Numerical Evaluation of the Kirchhoff Field Scattered
from a Hollow Circular Cylinder ............................................................................................... 22
R.W. Scharstein, The University of Alabama
The Effects of a Nearby Biological Body on the Parameters of a Small
Hand-Held Radio Operating in the H.F. Band (3 MHz – 30 MHz) .......................................... 24
R.M. Cooper and R. Radcliff, Ohio University
Response Calibration for Automated Network Analyzer Systems .............................................. 29
W. Zheng, C.E. Smith, and L. Wang, University of Mississippi
Acceleration of the Modal Series in the Neumann Scattering
Problem for a Hemispherical Shell .......................................................................................... 34
D.R. Denison and R.W. Scharstein, The University of Alabama

Electric Machines and Power Electronics

Adaptive Tracking Control of an Induction Motor ....................................................................... 38
J. Hu and D.M. Dawson, Clemson University; Z. Qu, University of Central Florida
Robust Tracking Control of a Permanent Magnet Stepper Motor
Driving a Mechanical Load ........................................................................................................ 43
R.C. Speagle, Jr. and D.M. Dawson, Clemson University
The Dynamics of a Series Resonant Converter with Third-Order Commutation Network ................................. 48

O. Ojo and I. Bhat, Tennessee Technological University

Hybrid Adaptive Tracking Control of Rigid-Link Electrically Driven Robots Actuated by Switched Reluctance Motors .................................. 53

M.D. Leviner and D.M. Dawson, Clemson University

An Eddy Current Braking System ................................................................. 58

L. Barnes, J. Hardin, and C.A. Gross, Auburn University;
D. Wasson, Diversified Products Corp.

Economic Analysis and Evaluation of Transformer and Induction Motor Losses Costs Using PC Software ............................................. 63

M.H. Shwehdi, Penn State Wilkes-Barre Campus; A. Hye, University Bridgeport;
and M.A Quasem, Howard University

Personal Computers in Power Engineering Education

Object-Oriented Programming for Power Engineering Education ....................... 59

D.L. Lubkeman, A. Ghosh, and J. Zhu, Clemson University

Application of PC-Based Measurement Techniques to ASD Performance Evaluation ................................................................. 74

P.Y.P. Wung and H.B. Puttgen, Georgia Institute of Technology

Stability and the Transient Energy Method for the Classroom .................................. 79

A. Llamas and J. De La Ree, Virginia Polytechnic Institute and State University

PC Based Data Acquisition for Electric Machinery Instruction ............................... 86

T.A. Haskew and T.E. Salem, The University of Alabama

The Use of the Personal Computer in Power Engineering Education at Auburn University ................................................................. 90

S.M. Halpin, R.M. Nelms, L.L. Grigsby, C.A. Gross, and J.L. Lowry, Auburn University

Power System Planning

A Reliability and Economic Evaluation of a Transmission System Part I: Using Frequency and Duration of Failure Method ......................................... 94

A. Shaban and A. Go, California Polytechnic State University

A Reliability and Economic Evaluation of a Transmission System Part II: Using Probability Method .................................................. 101

A. Shaban and A. Go, California Polytechnic State University

Design of an Expert System for Transmission Planning ........................................ 105

G.L. Lebby and L.H. Antoine, North Carolina A&T State University

Power Systems

Lightning Impulse Strengths of Multiple Dielectrics Used On Power Distribution System ........................................................................... 111

M.H. Shwehdi, Penn State Wilkes-Barre Campus; M.A. Quasem, Howard University;
and A. Hye, University of Bridgeport
Assessing Real-Valued Transform Algorithms for Fast Convolution in Electric Power Quality Calculations ................................................................. 115

K.J. Olejnizak, I.S. Prabhu, and D.I. Andrews, University of Arkansas

Validation of Applying the Maximum Likelihood Duty Cycle Forecast for Residential Load Aggregation ........................................................................ 119

S. Srinivasan, A. Chandrasekaran, and A.T. Alouani, Tennessee Technological University

Generalized Load Modeling in the Presence of Harmonics and Distortion ................................................................. 124

S. Varadan and E.B. Makram, Clemson University

Power Systems Operation and Control

The Application of Linear Multivariable Control to an AGC System ................................................................. 130

H.E. Shaalan, Mississippi State University

Improved Dynamic Programming Algorithms for Sequential Decision Processes with Applications to Economic Dispatches of Power Systems ................................................................. 135

M. Sun, The University of Alabama

Design of an Optimal Controller with Prescribed Eigenvalues for Power System ................................................................. 140

S.M. Badran, Umm Al-Qura University; and M.A. Choudhry, West Virginia University

Electronics

False Lock to Phase Lock Bifurcation in a PLL ................................................................................................. 146

J. Stensby, University of Alabama in Huntsville

Electron Avalanches in Argon Gas ......................................................................................................................... 151

C.A. Rodrigues and, S.M. Mahajan, Tennessee Technological University

Non-Inductive Impedance Transformer .................................................................................................................. 155

K.F. Subhani, D. DiBitonto, and T. Pennington, The University of Alabama; S. Baier and J. Stronczer, Honeywell Systems Research Center

Fast, Radiation-Hard GaAs CHIGFET Op Amp ..................................................................................................... 159

K.F. Subhani, D. DiBitonto, and T. Pennington, The University of Alabama; S. Baier and J. Stronczer, Honeywell Systems Research Center

Optics and Radar

Non-Uniform PRI Pulse-Doppler Radar .................................................................................................................. 164

M.W. Maier, University of Alabama in Huntsville

Near and Mid IR Fiber Brillouin - Active Optical Devices and Applications ............................................................. 169

C. Yu, H. Zhou, S. Cheng, and A. Holliday-Mosely, North Carolina A&T State University

The Effect of Random Phase Variation of Turbulence on Image Resolution ............................................................. 174

K. Park and A.D. Poularikas, University of Alabama in Huntsville

A Heuristic Approach to the Computation of 3D-Ray Trajectories in Step Index Optical Fibers ................................................................. 179

A. Nassopoulos and R. Pieper, Naval Postgraduate School
An Overview of Methods for Simulation of Nonlinear IF Radar Hardware
Components at Baseband Frequencies .............................................................. 184
T.L. Barrett, S.M. Gilbert, and M.C. Budge, Jr., Dynetics, Inc.; L.D. Bennett,
Missile and Space Intelligence Center

Modeling and Simulation I

Periodic Instrumental Variable Identification ................................................ 190
S.S. Wilson and C.L. Carnal, Tennessee Technological University
SPICE — A System Analysis Program? ......................................................... 195
J.B. Brown and C.E. Smith, University of Mississippi
A Novel Approach to Synthesis of Threshold Functions .................................. 200
S. Subramanian, B. Thiagarajan, and A. Homaifar,
North Carolina A&T State University
New DSP Microprocessor-Based Programmable Interface Components .......... 205
F.O. Simons, Jr. and A.D. George, Florida A&M University / Florida State University

Modeling and Simulation II

B. Sudhakar, The University of Alabama
Design of a Programmable Rainfall Simulator ............................................. 215
S.A. Smith and J.D. Schreiber, USDA-ARS National Sedimentation Laboratory
Analysis of Brain Scan Images Using Genetic Algorithms .......................... 218
J.E. Hogans IV and A. Homaifar, North Carolina A&T State University
Genetic Algorithm Composes Music ............................................................. 223

Expert Systems and Neural Networks

An Expert System for Digital Switch Alarm Processing .................................. 229
T. Hanson and K. Low, University of Southwestern Louisiana
Artificial Neural Network for Identification and Tracking Control
of a Flexible Joint Single-Link Robot .......................................................... 233
H. Kim and J.K. Parker, The University of Alabama
A Printed Circuit Board Inspection System Using Artificial Neural Network .... 238
C. Han and K. Mazouz, and N. Saravanan, Florida Atlantic University
Inventory Control Neural Network System .................................................. 243
Z.H. Ezziane, A.K. Mazouz, and C. Han, Florida Atlantic University

Control System Applications

Robust Control Design of an Autolanding System ....................................... 248
M. Ben Ghalia and A.T. Alouani, Tennessee Technological University
Observability Requirements for Passive Target Tracking ............................ 253
M. Ben Ghalia and A.T. Alouani, Tennessee Technological University
LQG/LTR Spacecraft Attitude Control ................................................................. 258
   T. Lahdhiri and A.T. Alouani, Tennessee Technological University
Development of a Dynamic Temperature Controller
for Physico-Chemical Experiments .................................................................. 263
   G. Rajeev, W.W. Wilson, and R.F. Follett, Mississippi State University
Constrained Multivariable Control of a Diaphragm-Type Chlorine/Caustic
Electrolyzers Using Dynamic Matrix Control .................................................. 268
   M. Nikrauesh, A. Farell, T.G. Stanford, and C.T. Lee,
   University of South Carolina
Evaluation of Control Strategies for Fixed-Bed Coal Gasifiers Using MGAS .......... 273
   S. Reddy and A. Farell, University of South Carolina

System Identification

The Residue Identification Algorithm and Constrained Least Squares
Applied to Space Shuttle Main Engine Data ...................................................... 279
   D.L. Bartholomew and D. Irwin, Ohio University
Total Least Squares and Constrained Least Squares Applied to Frequency
Domain System Identification ........................................................................... 285
   W.R. Young and D. Irwin, Ohio University
Characterization of an Infra-Red Multi-Position Sensor System ....................... 291
   D.A. Allwine and R.D. Irwin, Ohio University
A Study of Kalman Filtering and Maximum Likelihood Estimates of Wind
Profiles Using Simulated Laser Distortion Data ................................................. 296
   S.M. El-Sayed and R.P. Leland, The University of Alabama
Optimal Observation Schedule for Identification of Nonlinear Distributed
Systems with Applications ............................................................................... 301
   S.A. Belbas and M. Sun, The University of Alabama

Nonlinear, Adaptive, and Optimal Control

Model Reference Adaptive Control System Hyperstability Analysis .................. 307
   Z. Chuan and J.E. Fagan, University of Oklahoma
On the Solution of Nonlinear, Second Order, Autonomous Systems ................. 310
   S.E. Jones, The University of Alabama
Stabilization of Nonlinear Quadratic Systems .................................................. 314
   A.K. Bose, A.S. Cover, and J.A. Reneke, Clemson University
Hybrid Adaptive Compensation for Servo Disturbances
Harmonic in Displacement .............................................................................. 318
   H.-C. Chen and J. Wander, The University of Alabama
Discrete Adaptive Filters for Short-Lived Dynamic Systems ......................... 323
   R. Patton, Mississippi State University; and A. Killen,
   U.S. Army Missile Command
Invariant Optimal Control in Linear Dynamic Systems .................................... 328
   Y.B. Shtessel, University of South Carolina
Neural Networks

Applications of GA-Based Optimization of Neural Network Connection Topology ................................. 333
   E. Smuda and K. KrishnaKumar, The University of Alabama
Grammatical Inference Using Higher Order Recurrent Neural Networks ............................................. 338
   U. Harigopal and H.C. Chen, The University of Alabama
Neural Network Techniques Applied to Seismic Event Classification ..................................................... 343
   M.D. Murphy and J.A. Cercone, West Virginia Institute of Technology
A Radial Basis Network for Seismic Signal Discrimination .............................................................. 348
   S.D. Goodman, West Virginia Institute of Technology

Robotics

Development of a PC-Based Robot Hand Control Algorithm .............................................................. 353
   P. Burroughs, U.S. Army Space and Strategic Defense Command; and J.K Parker, The University of Alabama
Robust Position Tracking Control for Rigid-Link Flexible-Joint Robots .............................................. 358
   S.C. Martindale, M.M. Bridges, and D.M. Dawson, Clemson University
Design of a Robotic Feeder .................................................................................................................. 363
   V.T. Byrd and J.K. Parker, The University of Alabama
Dynamic Modelling and Link Mechanism of Mobile Robot ..................................................................... 368
   S.H. Park, The University of Alabama
Range Image Measurement System for a Mobile Robot Navigation ...................................................... 373
   Y.H. Kim, C. Wu, and J. Chikagwa, North Carolina A&T State University

Fuzzy Systems and Neural Networks

Fuzzy Control of Externally Disturbed Systems ..................................................................................... 379
   T. Martin and C. Kong, University of Arkansas
Immunized Neural Networks for Complex System Identification .......................................................... 383
   J.C. Neidhoefer and K. KrishnaKumar, The University of Alabama
Fuzzy Logic Classification of Seismic Events ......................................................................................... 388
   J.A. Cercone, West Virginia Institute of Technology

Neural Networks for Pattern Recognition

A Neural Network for Image Background Detection .............................................................................. 393
   R.R. Avent III, C.T. Ng, and J.A. Neal III, American Research Corporation of Virginia
TDNN Based Speaker Identification .................................................................................................... 396
   G.L. Berger and J.N. Gowdy, Clemson University
Speaker-Independent Voiced-Stop-Consonant Recognition Using a Block-Windowed Neural Network Architecture .................................................................................................................. 400
   B.D. Bryant and J.N. Gowdy, Clemson University
Electronic Design Automation and Testing

Modelling and Comparison of Adder Designs with Verilog HDL ................................. 406
   D.J. Jackson and S.J. Hannah, The University of Alabama
Classroom Experiences and Student Attitudes toward
Electronic Design Automation .................................................................................... 411
   R.L. Haggard, Tennessee Technological University
Programmable Logic Devices in Undergraduate Digital Design Courses .................... 416
   M.J. Batchelder and D.S. Meliksetian, South Dakota School of Mines and Technology
On Interacting Finite State Machine Design with Self-Checking Capability .................. 418
   F.Y. Busaba and P.K. Lala, North Carolina A&T State University

Software Engineering

Embedded System Tools ................................................................................................. 424
   B. Kanawati and W.E. Cowart, Jr., Advanced Technology Systems, IBM
Intelligent Computer Applications to Increase the Productivity and to Enhance
the Competitiveness of an Industrial Setting ................................................................. 431
   S. Ganesan, E.D. Robe, and C.A. Vassiliadis, Ohio University;
   G. D. Allen and T. Lowder, Cooper Industries
An Efficient Park Service Management Package ....................................................... 436
   C. Harry, A. Barbir, and D. Teague, Western Carolina University

Parallel Processing and Networks

Parallel Processing in the Networks of Workstations .................................................. 442
   Y. Wang and M. Celenk, Ohio University
Diskless Workstation Traffic Characterization in a University Environment .................. 447
   M.K. Acharya and B. Bhalla, University of Florida
Stream-Interleaved Pipelined RISC Processor Design for SIMD
and MIMD System Development ................................................................................... 452
   T. Killeen and M. Celenk, Ohio University
A Simulation Model for the Analysis of a Cluster-Based Multiprocessor System .......... 457
   M. De Armas and I. Mahgoub, Florida Atlantic University

Parallel Processing and Algorithms

A Comparative Study of Compact Finite Volume Methods for the 3-D
Diffusion Equations with Finite Difference ADI and SOR ........................................ 463
   B.N. Borah, S. Shankarlingam, and Y. Ji, North Carolina A&T State University;
   R.E. White and A. Kyrillidis, North Carolina State University
A Parallel Computing Array Algorithm for GLC Matrix Calculations ........................ 468
   C.T. Ng, American Research Corporation of Virginia
Parallel Structures for the Decomposition of Symmetric Matrices ........................................ 472
A. O. Barbir, Western Carolina University; and J. L. Aravena, Louisiana State University

Analysis of a Random Digraph Generation Technique Used in the Evaluation of Parallel-Processing Static Task Allocation Heuristics .................................................. 477
B. E. Wells, University of Alabama in Huntsville; and J. Neggers, The University of Alabama

Signal Processing

Seismic Data Processing via Homomorphic Filtering .......................................................... 483
A. Davari, West Virginia Tech

Matched Field Source Detection and Localization in High Noise Environments:
A Novel Reduced-Rank Signal Processing Approach ..................................................... 488
H. B. Riley and J. A. Tague, Ohio University

Range Correlation Effects on Phase Noise Spectra ......................................................... 492
M. P. Burt and M. C. Budge, Jr., Missile and Space Intelligence Center and Dynetics, Inc.

Image Processing I

Pixel-Feature-Controlling Edge Detection Based on Regularization (PEDBOR) ........... 498
S. Shao, J. Staudhammer, and R. R. Grams, University of Florida

Fast Progressive Reconstruction of Images in DCT Domain ........................................ 503
S.-G. Miaou and J. T. Tou, University of Florida

A Comparison of Methods for the Optimization of VGA Colormaps ............................. 508
L. D. Thede, H. D. Helsley, Jr., E. J. Maxfield, and J. L. Sterling, Ohio Northern University

Comparative Analysis of Image Compression Techniques .............................................. 513
D. J. Jackson and S. J. Hannah, The University of Alabama

3-D Planar Quadrantal and Diagonal Symmetry-Based Winograd Fourier Transform Algorithm .......................................................... 518
V. Rajaravivarma, and R. Rajaravivarma, Morehead State University

Image Processing II/Pattern Recognition

Smoothing Algorithm for 3D Surface Rendering from Stereo Images ........................... 524
J. E. Dudgeon, and V. Lakshminarayanan, The University of Alabama

Surface Reconstruction of Concealed Objects ............................................................. 529
D. Knight and J. Kim, North Carolina A&T State University

A Parallel Architecture for Performing Real Time Multi-Line Optical Character Recognition .......................................................... 533

An Associative Memory Approach to Isolated-Utterance Speech Recognition ............ 537
T. C. Ervin II and J. H. Kim, North Carolina A&T State University
An Approach to Three-Dimensional Object Recognition
Using a Hybrid Hopfield Network ................................................................. 540
T.D. Brooks and J.H. Kim, North Carolina A&T State University

Communication Networks

A Single-Server System with Limited Service Policy ....................................... 546
P.P. Wang and Z. Wu, The University of Alabama

A Proposed Modification for the DQDB Protocol and its Effect on
Fairness and Performance .................................................................................. 551
S. Shah and J.G. Bredeson, The University of Alabama

A Local Area Network on a Shoe String ............................................................ 556
D. Teague and A. Barbir, Western Carolina University

Measured Performance of an 1-Persistent CSMA on the Bus Based
on the Discrete Space-Time Model .................................................................... 560
K.Y. Lee and J.G. Bredeson, The University of Alabama

Congestion Management Techniques in High-Speed Cell Based Networks ............ 565
S. Darbha, H.P. Stern, and J.G. Bredeson, The University of Alabama

Bandwidth-Efficient Transmission Techniques

An Analysis of Direct Sequence CDMA for Mobile Cellular Systems .................. 571
I.D. Lee and H.P. Stern, The University of Alabama

Design and Simulation of a Modified Duobinary Acquisition System ................... 576
G.G. Koller and M.A. Belkerdid, University of Central Florida;
G.S. Rawlins, Signal Technologies, Inc.

A Modified On-Off Model for Conversational Speech with Short Silence Gaps ........ 581
H.P. Stern and K.-K. Wong, The University of Alabama

Additional Papers

Root-Loci for Periodic Linear Systems .................................................................. 587
J. Zhu and S.K. Vemula, Louisiana State University

Approximation and Control of Systems Using a Neural Net ................................. 594
M. Ermish and M. Nouri-Moghadam, Penn State University

Author Index ........................................................................................................ 599
