About ILTAM

ILTAM — The Israeli Users’ Association of Advanced Technologies in the Electronics Industry is a nonprofit organization that started its activities in 1993. The association was established by the industry, for the industry and it is owned by its members (the Israeli high-tech industry). Since its establishment, ILTAM has steadily drawn more companies and today about 90 electronics companies from the high-tech industry in Israel take part in its various activities. ILTAM operates under the umbrella of the MAGNET program, within the framework of the Office of the Chief Scientist of the Ministry of Industry and Trade.

ILTAM’s aim is to support and encourage knowledge sharing among its members on the latest technological breakthroughs developed in Israel and abroad. This aim is achieved by establishing working groups of experts, in the same discipline, from the different companies, who meet to exchange information, discuss common problems and ideas, and share knowledge among the participants. Through these open discussions, our association forms a framework for brainstorming that enriches the knowledge of the participants.

In addition, our association encourages the implementation of generic technological projects, which are performed by industries in the same line of activity. The knowledge and results of each project are open to all of the companies working on the project. ILTAM is engaged in providing the industry with the latest and most up-to-date information about new technological developments worldwide, in order to stimulate the Israeli industry to use and assimilate state-of-the-art technologies as fast as possible.
