About ILTAM - The Israeli Users’ Association of Advanced Technologies in High-Tech Integrated Systems

ILTAM - The Israeli Users’ Association of Advanced Technologies in High-Tech Integrated Systems, is a non-profit organization, which began its activities in 1993. The association was established by industry, for industry and ILTAM belongs to the members of the Israeli high-tech industry.

ILTAM operates in the framework of the MAGNET program, within the Office of The Chief Scientist at the Israeli Ministry of Trade and Industry.

ILTAM’s main goal is to promote, support and encourage companies to assimilate advanced technologies and methods. ILTAM has established various work groups of expert members sharing the same discipline, but from different companies. The members meet, exchange information, discuss common problems and ideas, and share knowledge and potential solutions. In these open discussions, ILTAM forms a framework for brainstorming that enriches the knowledge of the participants.

ILTAM activities are expressed in the distribution and assimilation of new methods and processes, in software engineering, software development processes, systems engineering, systems development, and hardware development.

ILTAM, since its establishment, has steadily increased its roster of participating companies. Today, there are more than 100 companies from the high-tech industry in Israel that take part in ILTAM’s various activities.

ILTAM collaborates with international technological associations, among them INCOSE, in systems engineering; IEEE CS, in software engineering; and SMTA, in hardware development and engineering processes.
