Automating Software Testing: A Life-Cycle Methodology

Elfriede Dustin

This tutorial outlines the Automated Test Life-cycle Methodology, a structured process for designing, developing, executing and managing testing that parallels the System Development Life-cycle.

Elfriede Dustin currently works as a test manager at BNA Software (www.bnasoftware.com) in Washington, DC. She is a SQA Certified test engineer and has supported test efforts for a multitude of applications. In support of software test efforts, Elfriede has been responsible for implementing automated test, or has performed as the lead consultant guiding the implementation of automated software test. She has led the successful rollout of automated testing tools at three companies, and has applied her rollout strategy on over nine different projects. She is the lead author of the best-selling book Automated Software Testing, with Paul Rashka (Addison-Wesley).
