Welcome Message from Symposium Organizers

Advances in the Web and mobile technologies offer new and exciting services to users in various domains such as e-business, healthcare, entertainment, and scientific activities. Various organizations, academic institutions and industries are putting enormous efforts and resources in the research and development of the Web and mobile technologies through the development of new initiatives and technologies. For instance, W3C Mobile Web Initiative aims to provide mobile devices with access to the vast information available on the Web and to enable information services to be adapted to the needs of users and the characteristics of mobile devices.

These new developments however introduce many new challenging problems to researchers. The aim of WAMIS 2010 was to bring together researchers in an effort to highlight the state-of-the-art and discuss the issues and opportunities to explore new research directions and develop new ideas. WAMIS was initially started as a workshop in 2005. After the successful meetings in 2005, 2006, 2007, WAMIS was upgraded to symposium in 2008.

WAMIS 2010 received submissions from around the world including contributions from both academia and the industry. The program committee is pleased to present an interesting technical program for WAMIS 2010. Based on the review reports, 18 papers were accepted for publication in the proceedings. The accepted papers represent different countries from Asia, Europe, North America, and Oceania. A number of selected papers from WAMIS 2010 will be invited to submit their extended versions to a special issue published by the World Wide Web Journal, Springer.

We would like to thank the General Chair Dr Dimitrios Georgakopoulos and the steering committee members for their guidance and support. Special thank go to Sujith Samuel Mathew for helping in the web site administration, and Dr Jian Yu for taking the publicity role of this event.

We would also like to thank all authors who submitted their papers and the program committee members for their support in the selection of quality papers thus enabling a good technical program. Their reviews and professional comments in a timely manner made this symposium a great success.

Finally, we express our gratitude to the AINA 2010 organizers for their constant help throughout all the stages of the symposium. We are also thankful to the local organizers for the local arrangements.

Program Co-Chairs
Michael Sheng, University of Adelaide, Australia
Muhammad Younas, Oxford Brookes University, UK
Elhadi Shakshuki, Acadia University, Canada
