Welcome Message from COLLABES 2015 International Workshop Organizers

The emergence of large scale distributed computing paradigms, such as Cloud Computing and Mobile Computing Systems, has opened up many opportunities for Collaborative Enterprise Systems (CES). Collaboration services are at the core of any Enterprise System, aiming to support collaboration among individuals, inter-teams and intra-teams within an enterprise.

While most CES systems have focused on using groupware systems (shared workspaces, video-conferencing, etc.) to support sharing and collaboration within one administrative domain in a rather fragmented way, the trend is to develop CES systems capable to support CES at large-scale integrating multi-administrative domains and different organizational and hierarchical structures to increase productivity, business value, and innovation. The objective of CES is thus to support efficient collaboration at inter-enterprise level at large scale by addressing mobility features of workforce, heterogeneity of resources, multi-domain nature, availability of resources and system reliability.

The aim of COLLABES workshop is to gather innovative academic research results and business experiences and best practices related to all aspects of collaborative enterprise systems. In this edition, 7 papers were accepted for presentation at the workshop covering topics from business intelligence, Emerging Technologies for Collaborative Enterprise Systems, Big Data based Collaboration, Massive Data Processing, Cloud Computing Systems and Data Centers, Security, Authentication and Privacy Collaboration at Enterprise Systems and Legacy and Regulation.

We thank all of the authors and reviewers for their support to the workshop, and we look forward to their contributions in forthcoming editions of the workshop.

We wish to all workshop participants a successful event and an enjoyable experience in Gwangju, Korea!
