CONTRIBUTIONS

Arithmetic Codes

Error Correction in High-Speed Arithmetic .................................................. R. T. Chien and S. J. Hong 433

Computational Complexity

A Measure of Computational Work ........................................................................ L. Hellerman 439

Computer Systems

Job-Mix Modeling and System Analysis of an Aerospace Multiprocessor ........ E. G. Mallach 446

Current Technology

Application of Uniform Loading Theory to Circuit Packaging and Memory Arrays in High-Speed Computers .... H. S. Hou 454

Fault-Tolerant Machines

A Deductive Method for Simulating Faults in Logic Circuits .......................... D. B. Armstrong 464

Sequential Machines

Sequential Permutation Networks ........................................................................ K. Harada 472

Switching Theory

The Relationship Between Multivalued Switching Algebra and Boolean Algebra Under Different Definitions of Complement ................................................................. S. Y. H. Su and A. A. Sarris 479

SHORT NOTES

Analog Applications

Symbolic Treatment of Certain Selector Functions ........................................... P. A. Holst 486

Cellular Networks

The Synthesis of Multivalued Cellular Cascades and the Decomposability of Group Functions ........................................................... O. Kolp 489

Fault-Tolerant Machines

On Error Control in Sequential Machines ......................................................... D. Mandelbaum 492

Logic Design

The Description and Use of Register-Transfer Modules (RTM's)® .................. C. G. Bell, J. L. Eggert, J. Grason, and P. Williams 495

Sequential Machines

A Note on State Minimization of a Special Class of Incomplete Sequential Machines ................................................................. H.-D. Ehrich 500

A Matrix Method for Determining All Pairs of Compatible States of a Sequential Machine ............................................................... I. Tomescu 502

(Contents continued on back cover)
Switching Theory
A Lower Bound on the Complexity of Arbitrary Switching Function Realizers.................. W. E. Hansalik 507

CORRESPONDENCE
Comments on “Design of Diagnosable Iterative Arrays”................................................. A. D. Friedman and P. R. Menon 511
Comments on “A Fast Digital Computer Method for Recursive Estimation of the Mean”............. J. C. Majithia 511
Comments on “A Simplified Definition of Walsh Functions”.............................................. R. Kitai and K.-H. Siemens 512
Simply Invertible Matrices. ...................................................... P. V. Sankar, S. K. Sen, and E. V. Krishnamurthy 512
A Note on Division Algorithms Based on Multiplication................................................ Z. Shalam and Z. Riesel 513

CONTRIBUTORS.............................................................................. 515

BOOK REVIEWS
B72-9  Compiler Construction for Digital Computers—D. Gries .................................. Reviewed by E. A. Feustel 517
