CONTRIBUTIONS

Computer Systems
An Adaptive Replacement Algorithm for Paged-Memory Computer Systems.................. J. M. Thorton, Jr., and J. D. Irwin 1053
The Design of Multipoint Linkages in a Teleprocessing Tree Network........................ K. M. Chandy and R. A. Russell 1062

Iterative Arrays
Multidimensional Linear Iterative Circuits-General Properties.............................. D. D. Givone and R. P. Roesser 1067
A Class of Autonomous One-Dimensional Iterative Arrays of Linear Machines................ A. Iosupovitz and M.-K. Hu 1073

Switching Theory
Minimum Two-Level Threshold Gate Realizations................................................ B. D. Carroll and C. L. Coates, Jr. 1086
The Synthesis of Minimal Hazardless TANT Networks......................................... J. Frackowiak 1099

SHORT NOTES

Automata Theory
On Complete Systems and Finite Automata......................................................... A. T. Pu 1109

Hybrid Computers
A Versatile Multiplying Digital-to-Analog Converter.............................................. N. Thechenannamoorthy and J. B. Plant 1113

Iterative Arrays
A Cellular Permuter Array......................................................................................... S. Bandyopadhyay, S. Basu, and A. K. Choudhury 1116

Probabilistic Machines
Additive Bernoulli Noise Linear Sequential Circuits............................................... H. N. El-Ghoroury and S. C. Gupta 1119

Sequential Machines
Modular Networks and Nondeterministic Sequential Machines................................. J. D. Ullman and P. Weiner 1124

Switching Theory
An Iterative Technique for Determining the Minimal Number of Variables for a Totally Symmetric Function with Repeated Variables................................. R. C. Born 1129
