Applications

Fast Hardware Fourier Transformation Through Counting

Automata Theory

Applying Probability Measures to Abstract Languages

Combinational Networks

On Symmetric Functions With Redundant Variables—Weighted Functions

Computational Complexity

Some New Results on Average Worst Case Carry

Computer Graphics

Design of a Graphic Generator for Remote Terminal Application

Computer Systems

Analysis of an Information System Model with Transfer Penalties

The Anticipatory Control of a Cyclically Permutable Memory

Fault-Tolerant Machines

The Design of a Microprogrammed Self-Checking Processor of an Electronic Switching System

Maintenance Techniques of a Microprogrammed Self-Checking Control Complex of an Electronic Switching System

Synthesis of Diagnosable FET Networks

Hybrid Computation

Dynamic Programming for the Partitioning of Numerical Simulations with Hybrid Computer Applications

Sequential Machines

Synthesis of Multiple-Input Change Asynchronous Circuits Using Transition-Sensitive Flip-Flops

(Contents continued on back cover)
CORRESPONDENCE

The Parallel Evaluation of Arithmetic Expressions Without Division.................. R. Brent, D. Kuck, and K. Maruyama 532
Structured Storage AFA.................................................................................. A. Gabrielian and S. Ginsburg 534
How Big Should a Printed Circuit Board Be?................................................... I. E. Sutherland and D. Oestreicher 537
Comments on “A Fast Computer Method for Matrix Transposing” and Application to the Solution of Poisson’s Equation ......................................................... U. Schumann 542
Author’s Reply............................................................................................... J. O. Eklundh 543
On the Twiddling Factors.................................................................................. C. K. Yuen 544

BOOK REVIEWS

B73–9   Introduction to Computer Organization and Data Structures—H. S. Stone... Reviewed by C. V. Ramamoorthy 545
B73–11  Digital Circuits and Devices—T. Kohonen.................................................. Reviewed by M. Faiman 546
B73–12  Fault Detection in Digital Circuits—A. D. Friedman and P. R. Menon.... Reviewed by S. Y. H. Su 547
