PAPERS

Algorithms
More Efficient Radix-2 Algorithms for Some Elementary Functions

Combinational Networks
Equational Realizations of Switching Functions

Computer Systems
On the Performance of Certain Multiprocessor Computer Organizations

Digital Signal Processing
A/D Conversion Using Geometric Feedback AGC

Fault Diagnosis
System Fault Diagnosis: Closure and Diagnosability with Repair

Sequential Machines
Minimization of Incompletely Specified Sequential Machines

CORRESPONDENCE
An Algebraic Method for Designing Multivalued Logic Circuits Using Principally Binary Components
Fault-Detection Experiments for Parallel-Decomposable Sequential Machines
On the Minimization of Tree-Type Universal Logic Circuits
Computer Methods for Creating Photomosaics
On Computation of the Hadamard Transform and the R Transform in Ordered Form
An Alternative Definition for “Neighborhood of a Point”
On the Performance of Magnetic Bubble Memories in Computer Systems
A Prime Implicant Algorithm with Factoring
A Note on Fast Base Extension for Residue Number Systems with Three Moduli
Structural Preserving Morphisms of Finite Automata and an Application to Graph Isomorphism
On a Covering Problem for Partially Specified Switching Functions
Comments on “Checking Experiments for Sequential Machines”
Comments on “Synthesis of Multiple-Input Change Asynchronous Machines Using Controlled Excitation and Flip-Flops”
