# TABLE OF CONTENTS

PROCEEDINGS OF THE THIRD ANNUAL SYMPOSIUM ON SWITCHING CIRCUIT THEORY AND LOGICAL DESIGN

Chicago, October 7-12, 1962

## I. MINIMIZATION TECHNIQUES

- On the Minimal Third Order Expression of a Boolean Function .......................... 5  
  by A. R. Meo
- Research and Algorithms in the Theory of Boolean Formulas ............................ 25  
  by E. W. Samson and L. Calabi
- The Algebra of Boolean Formulas: Some Criteria for Minimality ........................ 33  
  by L. Calabi and J. A. Riley
- Minimal Boolean Expressions with more than Two Levels of Sums and Products ........ 49  
  by E. L. Lawler

## II. SEQUENTIAL CIRCUITS I

- Machine Properties Preserved Under State Minimization ..................................... 61  
  by C. C. Elgot and J. D. Rutledge
- A Procedure for Obtaining an Economical Asynchronous Sequential Circuit Directly from a Set of Regular Expressions .................................................. 71  
  by B. Hazel tine
- States of Sequential Machines whose Logical Elements Involve Delay ................. 81  
  by F. E. Hohn
- Reduction of Feedback Loops in Sequential Circuits and Carry Leads in Iterative Networks ................................................................. 91  
  by E. J. McCluskey

## III. SEQUENTIAL CIRCUITS II

- The Synthesis of Cascade Switching Circuits .................................................. 103  
  by R. E. Levien
- Some Theorems for Incompletely Specified Sequential Machines with Applications to State Minimization ............................................................... 123  
  by J. C. Beatty and R. E. Miller
- Rounded-transient Automata .............................................................................. 137  
  by S. Winograd
- Generalized Automata and their Information Losslessness .................................... 143  
  by S. Even

## IV. COMBINATIONAL PROBLEMS

- Synthesis of Combinational Logic using Three-input Majority Gates .................... 149  
  by S. B. Akers, Jr.
- A Realization Procedure for Threshold Gate Networks .................................... 159  
  by P. M. Lewis II and C. L. Coates
- Generation of Self-dual Threshold Functions and Lower Bounds of the Number of Threshold Functions and a Maximum Weight ............................... 169  
  by S. Muroga
- On Some Transformation Theorems in Many-valued Logical Systems .................... 185  
  by C. K. Tung
