Panel II

Real-Time Standards in CORBA, Java, and UML

Moderator
Bran Selic □ Rational, Canada

Panelists
Uwe Brinkschulte □ IPR - University of Karlsruhe, Germany
Pär Emanuelson □ Ericsson, Sweden
Carlos O’Ryan □ University of California - Irvine, USA

Summary

In order to support the development of real-time distributed computing systems using object-oriented methodologies an effort exists to create standards that incorporate real-time properties into CORBA, Java, and UML. This panel will review issues in the evolution of these important standards. Experts in each of these standards will present their view on the current and future directions of the effort to establish these standards.
