# Table of Contents

Foreword ............................................................................................................................................... ix  
Call for Papers ...................................................................................................................................... xi  
Committees .......................................................................................................................................... xii  

## Keynote Addresses
- Requirements for Evolving Systems: A Telecommunications Perspective ........................................ 2  
  Dr. Pamela Zave, AT&T Laboratories  
- The Hidden Meta-Requirements of Security and Privacy .................................................................... 10  
  Prof. Gene Spafford, CERIAS/Purdue University  
- Practice-Based Design ..................................................................................................................... 11  
  Prof. Lucy Suchman, Lancaster University  
- Requirements Engineering and Program Synthesis: Mutually Exclusive or Synergistic? ...................... 12  
  Dr. Michael Lowry, NASA Ames Research Center  

## Full Papers

### Session P1: Representing & Communicating Requirements
- Events and Constraints: A Graphical Editor for Capturing Logic Requirements of Programs ............... 14  
  M. Smith, G. Holzmann, and K. Etessami  
- Virtual Environment Modeling for Requirements Validation of High Consequence Systems .................. 23  
  V. Winter, D. Desovski, and B. Cukic  
- Metaphors of Intent ........................................................................................................................... 31  
  C. Potts  

### Session P2: Requirements for Product Lines
- Consistency Management of Product Line Requirements ...................................................................... 40  
  J. Savolainen and J. Kuusela  
- Product-Line Requirements Specification (PRS): An Approach and Case Study ..................................... 48  
  S. Faulk  
- Extending the Product Family Approach to Support n-Dimensional and Hierarchical Product Lines ....... 56  
  J. Thompson and M. Heimdahl  

### Session P3: Organisational Issues I
- Matching ERP System Functionality to Customer Requirements ......................................................... 66  
  C. Rolland and N. Prakash  
- Software Acquisition: A Business Strategy Analysis ............................................................................ 76  
  B. Farbey and A. Finkelstein  
- An Industrial Survey of Requirements Interdependencies in Software Product Release Planning .......... 84  
  P. Carlshamre, K. Sandahl, M. Lindvall, B. Regnell, and J. Dag
### Session P4: RE Methods & Processes

- **Evolving Beyond Requirements Creep: A Risk-Based Evolutionary Prototyping Model**
  
  *R. Carter, A. Antón, A. Dagnino, and L. Williams*
  
  Page 94

- **Will It Work?**

  *J. Hammond, R. Rawlings, and A. Hall*
  
  Page 102

- **Requirements Engineering for Complex Collaborative Systems**

  *A. Sutcliffe*
  
  Page 110

### Session P5: Scenarios & Requirements Negotiation

- **Domain Independent Regularities in Scenarios**

  *M. Ridao, J. Doorn, and J. Leite*
  
  Page 120

- **An Empirical Study of Facilitation of Computer-Mediated Distributed Requirements Negotiations**

  *D. Damian, A. Eberlein, B. Woodward, M. Shaw, and B. Gaines*
  
  Page 128

### Session P6: Organisational Issues II

- **The Role of Policy and Stakeholder Privacy Values in Requirements Engineering**

  *A. Antón, J. Earp, C. Potts, and T. Alspaugh*
  
  Page 138

- **Integrating Organizational Requirements and Object Oriented Modeling**

  *J. Castro, F. Alencar, G. Filho, and J. Mylopoulos*
  
  Page 146

- **Requirements Modeling for Organization Networks: A (Dis-)Trust-Based Approach**

  *G. Gans, M. Jarke, S. Kethers, G. Lakemeyer, L. Ellrich, C. Funken, and M. Meister*
  
  Page 154

### Session P7: Formal Methods & Tools

- **XML-Based Method and Tool for Handling Variant Requirements in Domain Models**

  *S. Jarzabek and H. Zhang*
  
  Page 166

- **Model Checking Early Requirements Specifications in Tropos**

  *A. Fuxman, M. Pistore, J. Mylopoulos, and P. Traverso*
  
  Page 174

- **An Algorithm for Strengthening State Invariants Generated from Requirements Specifications**

  *R. Jeffords and C. Heitmeyer*
  
  Page 182

### Session P8: Requirements & Design

- **Residual Requirements and Architectural Residues**

  *D. Wile*
  
  Page 194

- **Reconciling Software Requirements and Architectures: The CBSP Approach**

  *P. Grünbacher, A. Egyed, and N. Medvidovic*
  
  Page 202

- **Requirements-Based Dynamic Metrics In Object-Oriented Systems**

  *J. Cleland-Huang, C. Chang, H. Kim, and A. Balakrishnan*
  
  Page 212

### Session P9: Requirements for Critical Systems

- **Evolution of Safety-Critical Requirements Post-Launch**

  *R. Lutz and I. Mikulski*
  
  Page 222

- **Deriving Safety Requirements Using Scenarios**

  *K. Allenby and T. Kelly*
  
  Page 228

  *D. Del Gobbo and A. Mili*
  
  Page 236
Minitutorials
Systematic Documentation of Requirements .......................................................... 248
   Dave Parnas, McMaster University
Goal-Oriented Requirements Engineering: A Guided Tour .................................... 249
   Axel van Lammeweerde, Université Catholique de Louvain

State-of-the-Practice Talks
Capturing Use Cases with DOORS........................................................................... 264
   Ian Alexander, Independent Consultant
Early Experience with Requirements Traceability in an Industrial Environment .... 265
   Merlin Dorfman and Roy Chardon, Cisco Systems
Where Are We on the “Fend off the Alligators – Drain the Swamp” Continuum? .... 266
   Don Gause, Savile Row, LLC and SUNY/Binghampton
A Unified Approach to Systems and Software Requirements .................................. 267
   Anthony Hall, Praxis Critical Systems Ltd.
What Happens With Good Requirements Practices .............................................. 268
   Ivy Hooks, Compliance Automation Inc.
Formalism and Informality in RE................................................................. 269
   Michael Jackson, Independent Consultant
Adoption of Requirements Engineering: Conditions for Success ......................... 270
   Hermann Kaindl, Siemens AG Österreich, PSE
Changes in the Requirements Engineering Processes for COTS-Based Systems .... 271
   Ron Kohl, Averstar Inc.
Is Backtracking so Bad? The Role of Learning in Software Development .......... 272
   Ben Kovitz, Vertel Corp.
Rethinking Requirements....................................................................................... 273
   Brian Lawrence, Coyote Valley Software
Business Implications on the Requirements Process ............................................. 274
   Brian Miller, GroceryGateway.com
Requirements Management at NASA .................................................................... 275
   Linda Rosenberg, NASA Goddard Space Flight Center
Systems Engineering at the Enterprise Level ......................................................... 276
   Richard Stevens, Teleslogic
Discovering Unanticipated Software Output Modes ............................................. 277
   Jeff Voas, Cigital Inc.

Panel Sessions
Designing for the User ....................................................................................... 280
   Chair: Monica Schraefel
Systems or Software: What Should the 'S' in SRE Stand for? .............................. 281
   Chair: Regina Gonzales
Extreme RE: What If There Is No Time for Requirements Engineering? ............. 282
   Chair: Sol Greenspan

Research Tool Demos
Ask Pete, Software Planning and Estimation through Project Characterization ...... 286
   T. Kurtz
An Integrated V&V Environment for Critical Systems Development ............................................ 287
I. Traoré

Risk Reduction Using DDP (Defect Detection and Prevention): Software Support
and Software Applications .............................................................................................................. 288
M. Feather

Specification Modeling and Validation Applied to Network Security Gateways ........................ 289
R. Hall

Posters

The Single Model Principle .............................................................................................................. 292
R. Paige and J. Ostroff

Integrating Informal and Formal Approaches to Requirements Modeling and Analysis .... 294
B. Cheng and L. Campbell

Acquiring Software Requirements As Conceptual Graphs .......................................................... 296
H. Delugach and B. Lampkin

What Happens before Requirements Engineering? ................................................................. 298
B. Wessels and J. Dobson

Scenario Patterns Based on Case Grammar Approach ......................................................... 300
K. Watahiki and M. Saeki

Empowering Requirements for a Product Family ................................................................. 302
E. Pérez-Miñana, P. Krause, and P. America

Requirements Archaeology: From Unstructured Information to High Quality Specifications ................................................................. 304
F. Kiedaisch, M. Pohl, J. Weisbrod, S. Bauer, and S. Ortmann

Geographic Problem Frames ..................................................................................................... 306
M. Nelson, D. Cowan, and P. Alencar

Requirements Elicitation Using Visual and Textual Information ........................................ 308
J. Moore and F. Shipman III

Process-Oriented Metrics for Software Architecture Adaptability ........................................ 310
L. Chung and N. Subramanian

A Requirements Negotiation Model Based on Multi-Criteria Analysis ................................ 312
H. In, D. Olson, and T. Rodgers

Issues of Visualized Conflict Resolution ............................................................................. 314
H. In and S. Roy

Evolving System Architecture to Meet Changing Business Goals:
An Agent and Goal-Oriented Approach ................................................................................. 316
D. Gross and E. Yu

Scenario-Based Systems Architecting ................................................................................... 318
G. Galal

Author Index .................................................................................................................................. 320
