Proceedings

2001 International Conference on Microelectronic Systems Education

MSE’01

Designing Microsystems in the New Millennium
Proceedings

2001 International Conference on Microelectronic Systems Education

June 17 – 18, 2001
Las Vegas, Nevada, USA

http://www.mseconference.org/

Sponsored by
IEEE Computer Society Technical Committee on Design Automation
IEEE Computer Society Technical Committee on Test Technology
IEEE Computer Society Technical Committee on VLSI

Held in cooperation with
Association for Computing Machinery (ACM)
Special Interest Group on Design Automation (SIGDA)

IEEE COMPUTER SOCIETY
Los Alamitos, California
Washington • Brussels • Tokyo
# Table of Contents

2001 International Conference on Microelectronic Systems Education — MSE’01

**Message from the General Chair** .............................................................. ix

**Conference Committee** ......................................................................... x

**Session 1: Keynote, Mixed Signal and Fabrication Services**

*Introduction: Rich Brown, University of Michigan (moderator)*

Keynote: Bob Brodersen

- Concept of a Joint University/Industry Course for Mixed-Signal System-On-Chip Design ........................................ 2
  J. Made, T. Schneider, A. Windisch, T. Hollstein, J. Becker, and M. Glesner

MOSIS: IC Prototyping and Low Volume Production Service ........................................ 4
  C. Piña

CMP: The Access to Advanced Low Cost Manufacturing ........................................ 6
  K. Torki and B. Courtois

**Poster Session 1P**

- Scaling Rules Allow the Reuse of MOS Analog Design ........................................ 8
  C. Galup-Montoro, M. Schneider, and R. Coitinho

- MOSFET Model with a Small Set of Parameters for Electronic Engineering Education ........................................ 10
  R. Coitinho, L. Spiller, M. Schneider, C. Galup-Montoro

- Efficient Production of Computer-Based Training in Chip Design ........................................ 12
  T. Catalkaya and U. Golze

- Interactive Microelectronics Technology Course Available on Website .......................... 14
  O. Bonnand, P. Münster, H. Lhermite, and C. Diaconescu

- An Industrial Impact on the Microelectronics Education at the Slovak University of Technology in Bratislava ........................................ 16
  D. Donoval

- Experience from a 450 Students/Year Course on Digital Logic and Computer Fundamentals using FPGAs and μ-Controllers ........................................ 18
  T. Njølstad and L. Natvig

- A University-Based Support Environment for the Xilinx University Program ........................................ 20
  M. Shanblatt, B. Foulds, and P. Kane

- Principles vs. Practices in Undergraduate Microelectronic Systems Education ........................................ 22
  B. Carlson

- A Methodology for Process Design Simulators of MEMS Based on VRML and JAVA ........................................ 24
  F. Pêcheux
Digital Hardware Organization Course for SoC Program ................................................................. 26
  P. Ellervee and H. Tenhunen

A Tutorial Tool for Switch Logic ........................................................................................................ 28
  V. Correia and A. Reis

FPGA Integrated Co-Design ........................................................................................................ 30
  R. Haskell and D. Hanna

Formal Verification of CPU in Laboratory Work ................................................................................. 32
  K. Okano, Y. Kitahama, A. Kitajima, T. Higashino, and K. Taniguchi

Exploring the Hardware/Software Continuum in a Computer Engineering Capstone Design Class Using FPGA-based Programmable Logic ......................................................... 36
  S. Loo, B. Wells, and R. Gaede

An Image Sensor as an Undergraduate VLSI Project Chip ................................................................. 38
  W. Leigh

Session 2: Systems on Chips
  Introduction: Don Bouldin, Univ. of Tennessee (moderator)

SoC Design Skills: Collaboration Builds a Stronger SoC Design Team ....................................................... 42
  P. Khosla, H. Schmit, M. Irwin, N. Vijaykrishnan, T. Cain, S. Levitan, and D. Landis

SOCWARE: A New Swedish Design Cluster for System-On-Chip ...................................................... 44
  P. Nilsson, P. Eles, and H. Tenhunen

SoC Curriculum
  S. Beaumont

System-On-Chip Research Infrastructure for Canadian Universities .................................................. 46
  D. Gale

Session 3: Design Courses
  Introduction: John Lockwood, Washington Univ. (moderator)

An Intra-Disciplinary Capstone Project in Digital Filter Design ...................................................... 52
  J. Armstrong, A. Bell, and G. Gray

Anatomy of a Radio Frequency Integrated Circuit Design Course .................................................. 54
  K. Kornegay

Platform and Methodology for Teaching Design of Hardware Modules in Internet Routers and Firewalls 56
  J. Lockwood

A Hardware/Software Codesign Senior Capstone Design Project in Computer Engineering ................... 58
  R. Klenke
**Poster Session 3P**

Design of a 32-Bit Microprocessor in an Undergraduate VLSI Design Course ........................................... 62
R. Klenke

SoC Masters: An International M.Sc. Program in System-on-Chip Design at KTH ........................................... 64
H. Tenhunen and E. Dubrova

Educational Java Applets for Visualizing MOS Memory ................................................................. 67
Z. Yuan and C. Wie

Web-Based Training for Microsystem Technologies and Design .................................................. 69
K. Hahn, R. Brück, J. Popp, and A. Priebe

CHIPDESIGN — A Novel Project-oriented Microelectronics Course .............................................. 71
M. Kulaczewski, S. Zimmerman, E. Barke, and P. Pirsch

Introducing Programmable Logic Devices into Digital Design .................................................. 73
L. Gomes

Synchronized Streaming Media in VLSI Education ........................................................................ 75
J. Tront

Integrated Circuits Design Teaching Using Professional CAD Environments ........................................ 77
R. Ribas, F. Barbosa, and N. Turatti

Micro-System Process for Education: Morphological and Electrical Characterization .................. 79
L. Palun, L. Montès, P. Morfouli, N. Mathieu, N. Guillemot, S. Descheneaux, J. Terrot, and C. Malhaire

Digital Design Education Infrastructure Using Multiple EDA Tool Vendors and Multiple Modes of Tool Access ........................................................................................................ 81
M. Johnson

Analog and Mixed Signal IC Design via Distance Learning: The CAD and Laboratory Dilemma ................................................ 83
R. Caverly

A Specialized Graduate Program in VLSI Design: A Success Story ........................................ 85
M. Balakrishnan

An Interactive Video Course in Multidisciplinarity and Collaborative Design for Systems on a Chip .......................................................................................................................... 87

Experiences in Developing a Research-Focused Project Course: IP-Core Based IC Design Enabled by 3D Wafer Bonding ........................................................................................................ 89
J. Liu and R. Gutmann

Micro-System Process for Education: Fabrication of a Pressure Sensor .................................... 91
Session 4: Design Courses and Distributed Learning

A System Design and Build Course on Wearable Computers .................................................. 94
D. Siewiorek and A. Smailagic

Design Contests as Class Projects: Are They Worth the Effort? ........................................ 96
H. Pottinger

A Web-based Approach Towards Building a Distance Education Course in Microelectronics ................................................................. 98
G. Dima, L. Voinea, and M. Profirescu

Web-Based Visualization Tools for Teaching VLSI CAD Algorithms ................................ 100
J. Nestor

A Graduate Level Course on Image Sensors and Digital Cameras .................................... 102
A. El Gamal and T. Chen

Session 5: Future Leaders, Ideal Hire, Distributed Learning, and Courses

Introduction: Jay Brockman (Notre Dame)

Practices for Recruiting and Retaining Graduate Women Students in Computer Science and Engineering ........................................ 106
S. Hassoun and S. Bana

Panel Discussion: Future Leaders and Ideal Hire

Author Index .................................................................................................................. 109
