Proceedings

20th IEEE Symposium on Reliable Distributed Systems

October 28 – 31, 2001
New Orleans, Louisiana, USA

Sponsored by
IEEE Computer Society Technical Committee on Distributed Processing

Los Alamitos, California
Washington • Brussels • Tokyo
Contents

Symposium on Reliable Distributed Systems—SRDS’01

Message from the Symposium Chair ix
Message from the Program Chair x
Conference Committee xi
Referees xiii
Workshop 1: Reliable and Secure Applications in Mobile Environments xiv
Workshop 2: Reliability in Embedded Systems xv

Keynote Lecture
Dr. Ambuj Goyal, General Manager, Solutions and Strategy, IBM Software Group

Session 1: Replication
Session Chair: Lorenzo Alvisi, University of Texas at Austin, USA

Optimizing File Availability in a Secure Serverless Distributed File System 4
J. Douceur and R. Wattenhofer

Primary-Backup Replication: From a Time-Free Protocol to a Time-Based Implementation 14
R. Oliveira, J. Pereira, and A. Schiper

How to Select a Replication Protocol According to Scalability, Availability, and Communication Overhead 24
R. Jiménez-Peris, M. Patiño-Martínez, B. Kemme, and G. Alonso

Session 2: Recovery
Session Chair: Gilles Muller, INRIA Rennes, France

Quantifying Rollback Propagation in Distributed Checkpointing 36
A. Agbaria, H. Attiya, R. Friedman, and R. Vitenberg

Continental Pronto 46
S. Frølund and F. Pedone

Compiler-Assisted Heterogeneous Checkpointing 56
F. Karablieh, R. Bazzi, and M. Hicks

Panel 1: Reliability and Security in Distributed and Mobile Systems
Moderator: Bharat Bhargava, Purdue University, USA

Applying Fault-Tolerance Principles to Security Research 68
A. Bhargava and B. Bhargava
The Challenge of Creating Productive Collaborating Information Assurance Communities via Internet Research and Standards

J. Betser

Can Reliability and Security be Joined Reliably and Securely?

K. Kwiat

Incorporation of Security and Fault Tolerance Mechanisms into Real-Time Component-Based Distributed Computing Systems

K. Kim

Research in High-Confidence Distributed Information Systems

M. Singhal

Session 3: Security

Session Chair: Catherine Meadows, Naval Research Labs, USA

Detecting Heap Smashing Attacks through Fault Containment Wrappers

C. Fetzer and Z. Xiao

Efficient Update Diffusion in Byzantine Environments

D. Malkhi, O. Rodeh, M. Reiter, and Y. Sella

An Analytical Framework for Reasoning about Intrusions

S. Upadhyaya, R. Chinchani, and K. Kwiat

Session 4: Agreement Protocols

Session Chair: Suresh Rai, Louisiana State University, USA

Optimistic Validation of Electronic Tickets

F. Pedone

A Consensus Protocol Based on a Weak FailureDetector and a Sliding Round Window

M. Hurfin, R. Macêdo, A. Mostefaoui, and M. Raynal

Polynomial Time Synthesis of Byzantine Agreement

S. Kulkarni, A. Arora, and A. Chippada

Session 5: Application Level Fault Tolerance

Session Chair: Luca Simoncini, University of Pisa & CNR, Italy

Looking Ahead in Atomic Actions with Exception Handling

A. Romanovsky

Assessing Inter-Modular Error Propagation in Distributed Software

A. Jhumka, M. Hiller, and N. Suri

Designing a Robust Namespace for Distributed File Services

Z. Zhang and C. Karamanolis
Panel 2: Building Reliable Systems from COTS Components

Moderator: Farokh Bastani, University of Texas, Dallas, USA

High-Quality Customizable Embedded Software from COTS Components ___________________________________________ 174
  F. Bastani

Application of Commercial-Grade Digital Equipment in Nuclear Power Plant Safety Systems _______________ 176
  M. Chiramal

Why Is It So Hard to Predict Software System Trustworthiness from Software Component Trustworthiness? ______________________________________________________ 179
  J. Voas

Session 6: Concise Contributions

Session Chair: Jie Xu, Durham University, UK

Message Logging Optimization for Wireless Networks __________________________________________________________ 182
  B. Yao and W. Fuchs

Reducing Noise in Gossip-Based Reliable Broadcast ____________________________________________________________ 186
  P. Kouznetsov, R. Guerraoui, S. Handurukande, and A. Kermarrec

Chasing the FLP Impossibility Result in a LAN or How Robust Can a Fault Tolerant Server Be? ____________ 190
  P. Urbán, X. Défago, and A. Schiper

Consensus with Written Messages Under Link Faults ____________________________________________________________ 194
  B. Weiss and U. Schmid

Efficient TDMA Synchronization for Distributed Embedded Systems _______________________________________________________________ 198
  V. Claesson, H. Lönn, and N. Suri

Efficient Recovery Information Management Schemes for the Fault Tolerant Mobile Computing Systems ________ 202
  T. Park, N. Woo, and H. Yeom

Session 7: QoS and Real-Time Systems

Session Chair: Gerhard Fohler, Malardalen University, Sweden

Using the Timely Computing Base for Dependable QoS Adaptation ____________________________________________ 208
  A. Casimiro and P. Verissimo

A Microkernel Middleware Architecture for Distributed Embedded Real-Time Systems __________________________ 218
  U. Brinkschulte, A. Bechina, F. Picioroaga, E. Schneider, T. Ungerer, J. Kreuzinger, and M. Pfeffer

Performance Analysis of the CORBA Notification Service ____________________________________________________ 227
  S. Ramani, K. Trivedi, and B. Dasarathy
Session 8: Mobile Systems
Session Chair: Nian-Feng Tzeng, University of Louisiana, USA

Reliable Real-Time Cooperation of Mobile Autonomous Systems ________________________________ 238
S. Schemmer, E. Nett, and M. Mock

On the Effectiveness of a Counter-Based Cache Invalidation Scheme and
Its Resiliency to Failures in Mobile Environments ________________________________ 247
G. Cao and C. Das

Comparison-Based System-Level Fault Diagnosis in Ad Hoc Networks ______________________________ 257
S. Chessa and P. Santi

Author Index___________________________________________________ 267
