Table of Contents

Preface ........................................................................................................................................................viii
Conference Organization ............................................................................................................................x
Steering Committee .....................................................................................................................................xi
Program Committee ...................................................................................................................................xii
Additional Reviewers ...............................................................................................................................xiv

Invited Talks
Counting Bugs is Harder Than You Think ..................................................................................................1
  Paul E. Black
Knitting Music and Programming: Reflections on the Frontiers of Source Code Analysis ..........................................................10
  Nicolas Gold

Static Analysis
Program Analysis Too Loopy? Set the Loops Aside .....................................................................................15
  Eric Larson
Computation of Alias Sets from Shape Graphs for Comparison of Shape Analysis Precision ..........................25
  Viktor Pavlu, Markus Schordan, and Andreas Kral
Assumption Hierarchy for a CHA Call Graph Construction Algorithm ......................................................35
  Jason Sawin and Atanas Rountev
# Embedded Systems and Mobile Platforms

Tuning Static Data Race Analysis for Automotive Control Software ........................................45  
**Steffen Keul**

Exploring the Development of Micro-apps: A Case Study on the BlackBerry and Android Platforms ........................................................................................................55  
**Mark D. Syer, Bram Adams, Ying Zou, and Ahmed E. Hassan**

# Defects and Security

Are the Clients of Flawed Classes (Also) Defect Prone? ..................................................65  
**Radu Marinescu and Cristina Marinescu**

Equational Reasoning on x86 Assembly Code ..................................................................75  
**Kevin Coogan and Saumya Debray**

Security Testing of Web Applications: A Search-Based Approach for Cross-Site Scripting Vulnerabilities .................................................................................85  
**Andrea Avancini and Mariano Ceccato**

# Clones

A Study of Cloning in the Linux SCSI Drivers .................................................................95  
**Wei Wang and Michael W. Godfrey**

A Constraint Programming Approach to Conflict-Aware Optimal Scheduling of Prioritized Code Clone Refactoring ........................................................................105  
**Minhaz F. Zibran and Chanchal K. Roy**

Analyzing the Effect of Preprocessor Annotations on Code Clones ................................115  
**Sandro Schulze, Elmar Jürgens, and Janet Feigenspan**

# Search

The Effect of Lexicon Bad Smells on Concept Location in Source Code ..........................125  
**Surafel Lemma Abebe, Sonia Haiduc, Paolo Tonella, and Andrian Marcus**

Recovering a Balanced Overview of Topics in a Software Domain ..................................135  
**Matthew B. Kelly, Jason S. Alexander, Bram Adams, and Ahmed E. Hassan**

A Comparative Study of Code Query Technologies .........................................................145  
**Tiago L. Alves, Jurriaan Hage, and Peter Rademaker**
Tools
I2SD: Reverse Engineering Sequence Diagrams from Enterprise Java Beans
with Interceptors ..............................................................................................................155
  Serguei Roubtsov, Alexander Serebrenik, Aurélien Mazoyer,
  and Mark van den Brand
CheckPointer - A C Memory Access Validator ..............................................................165
  Michael Mehlich
Lightweight Transformation and Fact Extraction with the srcML Toolkit ....................173
  Michael L. Collard, Michael J. Decker, and Jonathan I. Maletic

Transformation
Automatic Parallelization of Side-Effecting Higher-Order Scheme Programs .................185
  Jens Nicolay, Coen de Roover, Wolfgang de Meuter, and Viviane Jonckers
What You See is What You Asked for: An Effort-Based Transformation
of Code Analysis Tasks into Interactive Visualization Scenarios ..................................195
  Ahmed Sfayhi and Houari Sahraoui

Author Index ..................................................................................................................204
