**CONTRIBUTIONS**

**Computer System**

Optimal File Allocation in a Multiple Computer System .............................................. W. W. Chu 885

**Hardware**

Computer-Aided Test Generation for Four-Phase MOS LSI Circuits ............................. Y. T. Yen 890
Magnetic-Field Design Considerations for a Plated-Wire Memory .................................. H. K. V. Lotsch 894

**Logical Design**

Unified Interval Classification and Unified 3-Classification for Associative Memories .......... A. Wolinsky 899

**Pattern Recognition**

Potential Functions in Mathematical Pattern Recognition ........................................ W. S. Meisel 911
Computer Optimization of Recognition Networks ....................................................... H. Drucker 918

**Switching Theory**

An Approach for the Realization of Threshold Functions of Order $r$ ....................... H. R. Hwa and C. L. Sheng 923

**SHORT NOTES**

**Computer Circuits**

Worst-Case Analysis of a Resistor Memory Matrix .................................................... W. T. Lynch 940

**Computer System**

On the Tradeoff Between Response and Preemption Costs in a Foreground–Background Computer Service Discipline ......................................................... E. G. Coffman, Jr. 942

**Switching Theory**

A Cellular Structure for Sequential Networks ............................................................ D. Ferrari and A. Grasselli 947

**CORRESPONDENCE**

On Mod-2 Sums of Products ......................................................................................... M. S. Schmoookler 957
Logical Design Using Shift Registers ........................................................................ W. A. Davis 958
Evaluation of Akers' Method for Simplification of Switching Functions ..................... J. B. Klahn and C. H. Roth, Jr. 959
Correction to "A Division Method Using a Parallel Multiplier" .................................. D. Ferrari 960
